Prevention First 2012

Finding a green ship in a blue ocean

October 2012

- About RightShip
- The Existing Vessel Design Index
- Age vs. Performance
- Practical application examples

About Rightship

- Independent company formed in Oct 2001
 - Melbourne, London & Houston
 - 200+ Customers globally
- Ship Vetting & Risk Management
 - Petroleum & Dry Cargo Vetting Service
 - Environmental Rating & CO₂ Benchmarking
- Worldwide dedicated vetting specialists
 - Former serving Masters and Chief Engineers
- Award winning proven system
 - ISO9001 and ISO27001 Certified

The Existing Vessel Design Index

RIGHTSHIP

Framing the Opportunity

EEDI – What is it?

$$\frac{\left(\prod_{j=1}^M f_j \right) \left(\sum_{i=1}^{nME} P_{ME(i)} \cdot C_{FME(i)} \cdot SFC_{ME(i)} \right) + (P_{AE} \cdot C_{FAE} \cdot SFC_{AE} *) + \left(\left(\prod_{j=1}^M f_j \cdot \sum_{i=1}^{nPTI} P_{PTI(i)} - \sum_{i=1}^{neff} f_{eff(i)} \cdot P_{AE_{eff(i)}} \right) C_{FAE} \cdot SFC_{AE} \right) - \left(\sum_{i=1}^{neff} f_{eff(i)} \cdot P_{eff(i)} \cdot C_{FME} \cdot SFC_{ME} \right)}{f_i \cdot Capacity \cdot V_{ref} \cdot f_w}$$

- Energy Efficiency Design Index (EEDI)
- A formula produced by the IMO to calculate the amount of CO₂ emitted (in grams) by a vessel for every tonne of cargo carried a nautical mile based on:
 - Total engine power
 - Fuel type & specific fuel consumption
 - Cargo carrying capacity
 - Speed
- Agreed at MEPC 62 in July 2011 and comes in to force for [new deliveries](#) from January 2013

EVDI™ – What is it?

$$\frac{\left(\prod_{j=1}^M f_j \right) \left(\sum_{i=1}^{nME} P_{ME(i)} \cdot C_{FME(i)} \cdot SFC_{ME(i)} \right) + (P_{AE} \cdot C_{FAE} \cdot SFC_{AE} *) + \left(\left(\prod_{j=1}^M f_j \cdot \sum_{i=1}^{nPTI} P_{PTI(i)} - \sum_{i=1}^{neff} f_{eff(i)} \cdot P_{AE_{eff(i)}} \right) C_{FAE} \cdot SFC_{AE} \right) - \left(\sum_{i=1}^{neff} f_{eff(i)} \cdot P_{eff(i)} \cdot C_{FME} \cdot SFC_{ME} \right)}{f_i \cdot Capacity \cdot V_{ref} \cdot f_w}$$

- Existing Vessel Design Index (EVDI™)
- This formula produces the amount of CO₂ emitted (in grams) by a vessel for every tonne of cargo carried a nautical mile based on:
 - Total engine power
 - Fuel type & specific fuel consumption
 - Cargo carrying capacity
 - Speed
- Developed by RightShip based on the same assumption as the EEDI, this formula can be validly applied to existing vessels right now

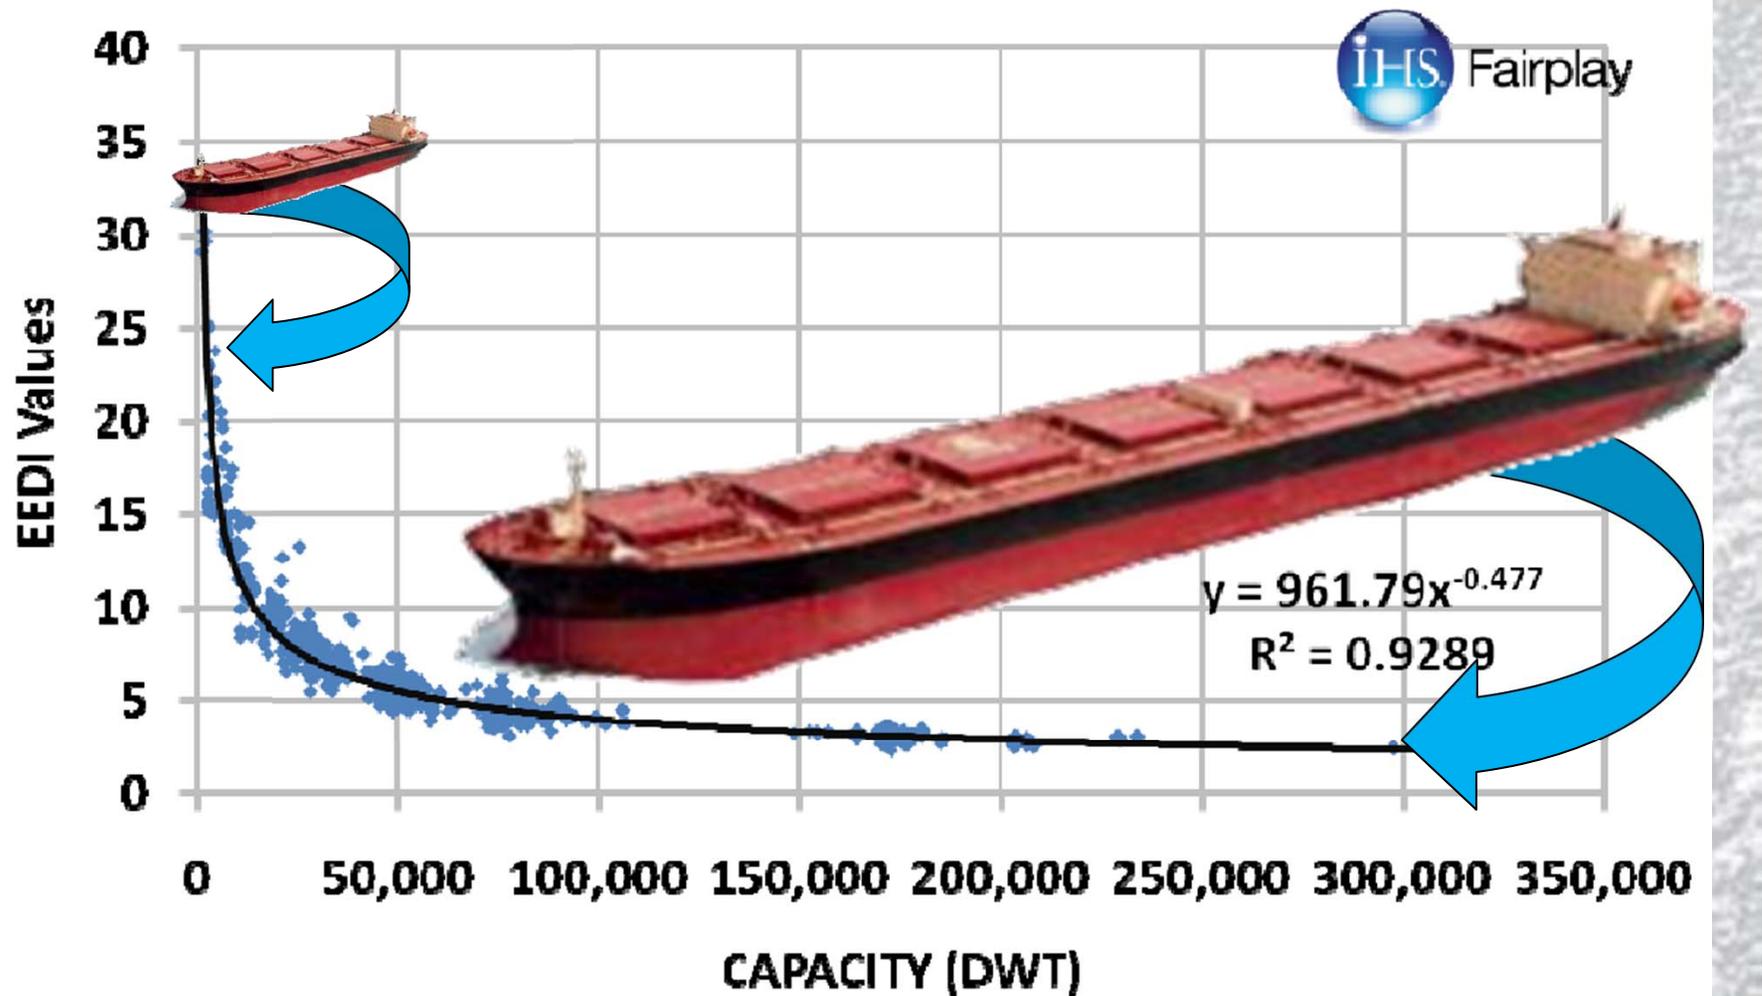

EVDI™ – What it is not?

- **Not** a **replacement** for the EEDI
- **Not** a mechanism to drive **retrospective legislation**
- **Not** a measure of the vessel's **operational performance**
- **Not** going to tell you if a vessel has been designed **efficiently** (comparison only)

The Relative Efficiency of the Existing Fleet

EEDI reference line, bulk carriers ≥ 400 gt

Basis of Comparison

| Ship Type | Basis of Size Range | Size Rating Range (Vessels) | Approximate Number of Ships |
|------------------------------------|---------------------|-----------------------------|-----------------------------|
| Bulk Carrier | DWT | 200 | 11,300 |
| Chemical Tanker | DWT | 50 | 700 |
| Container | TEU | 200 | 5,300 |
| Crude & Products Tanker (inc. OBO) | DWT | 200 | 10,300 |
| Cruise | GT | 50 | 600 |
| General Cargo | DWT | 100 | 11,700 |
| LNG Tanker | CBM | 50 | 400 |
| LPG Tanker | CBM | 50 | 1,200 |
| Refrigerated Cargo Ship | DWT | 50 | 1,000 |
| Vehicle | DWT | 50 | 800 |

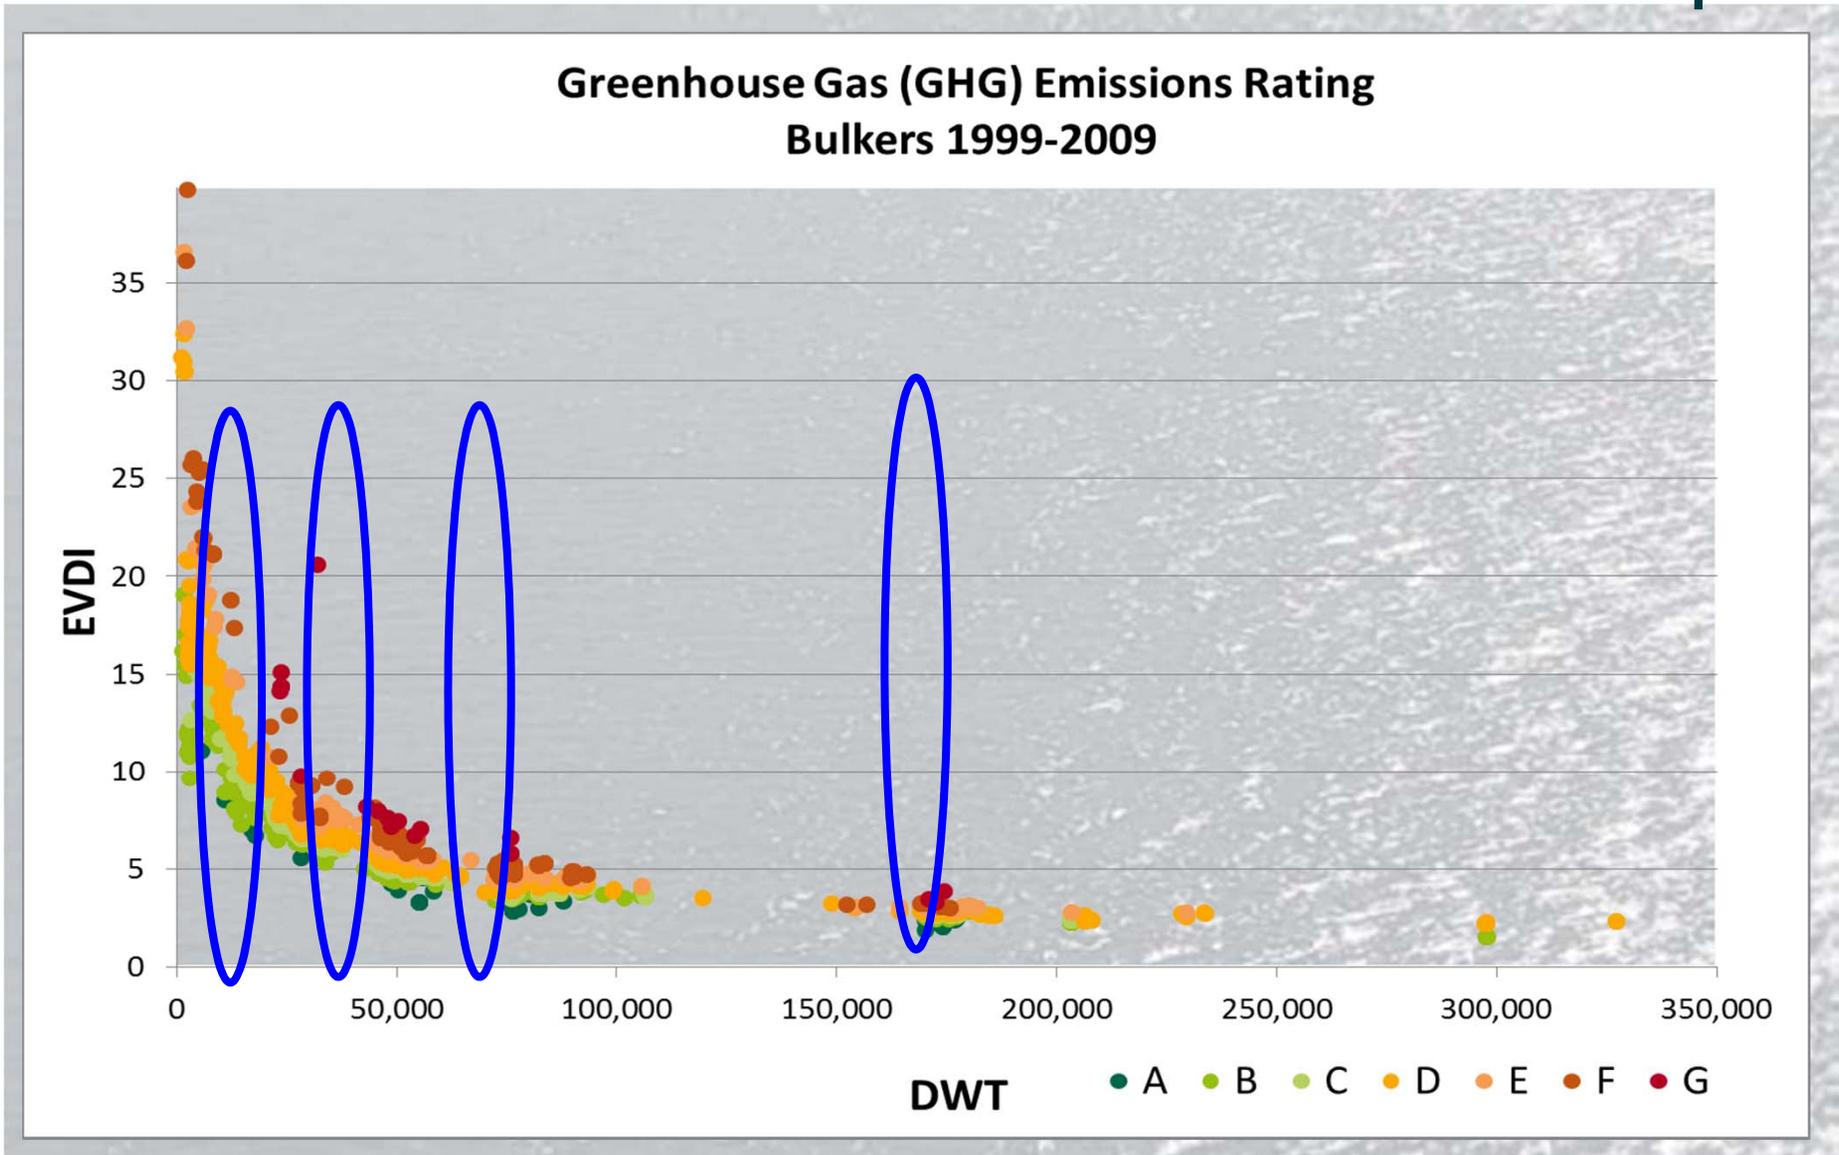

Let's Compare

| Section 3.1 - Existing Vessel Design Index (EVDI) | | | | | | | | | | | | | | | | | |
|---|---|-----------------|-------|--------|--------|--------|---------|---|---|-----------------|-------|-------|-------|--------|--------|--------|---------|
| EVDI Ship Type, Comparison Factor | Bulker, DW | | | | | | | | | | | | | | | | |
| EVDI (grams CO2 per tonne nautical mile) | 4.925 | | | | | | | | | | | | | | | | |
| EVDI Size Score | 0.993 | | | | | | | | | | | | | | | | |
| GHG Emissions Rating | | | | | | | | | | | | | | | | | |
| EVDI Size Score & Group Rating | <table border="1"> <tr> <td>EVDI Size Group</td> <td>A</td> <td>B</td> <td>C</td> <td>D</td> <td>E</td> <td>F</td> <td>G</td> </tr> <tr> <td>EVDI Size Score</td> <td>> 2.0</td> <td>> 1.0</td> <td>> 0.5</td> <td>> -0.5</td> <td>> -1.0</td> <td>> -2.0</td> <td><= -2.0</td> </tr> </table> | EVDI Size Group | A | B | C | D | E | F | G | EVDI Size Score | > 2.0 | > 1.0 | > 0.5 | > -0.5 | > -1.0 | > -2.0 | <= -2.0 |
| EVDI Size Group | A | B | C | D | E | F | G | | | | | | | | | | |
| EVDI Size Score | > 2.0 | > 1.0 | > 0.5 | > -0.5 | > -1.0 | > -2.0 | <= -2.0 | | | | | | | | | | |
| Top Rated Peers | GENCO HUNTER (B) JIN YANG (B) THUNDERBIRD BULKER (B) TANAGER BULKER (B) TESS BULKER (B) | | | | | | | | | | | | | | | | |

Let's Compare

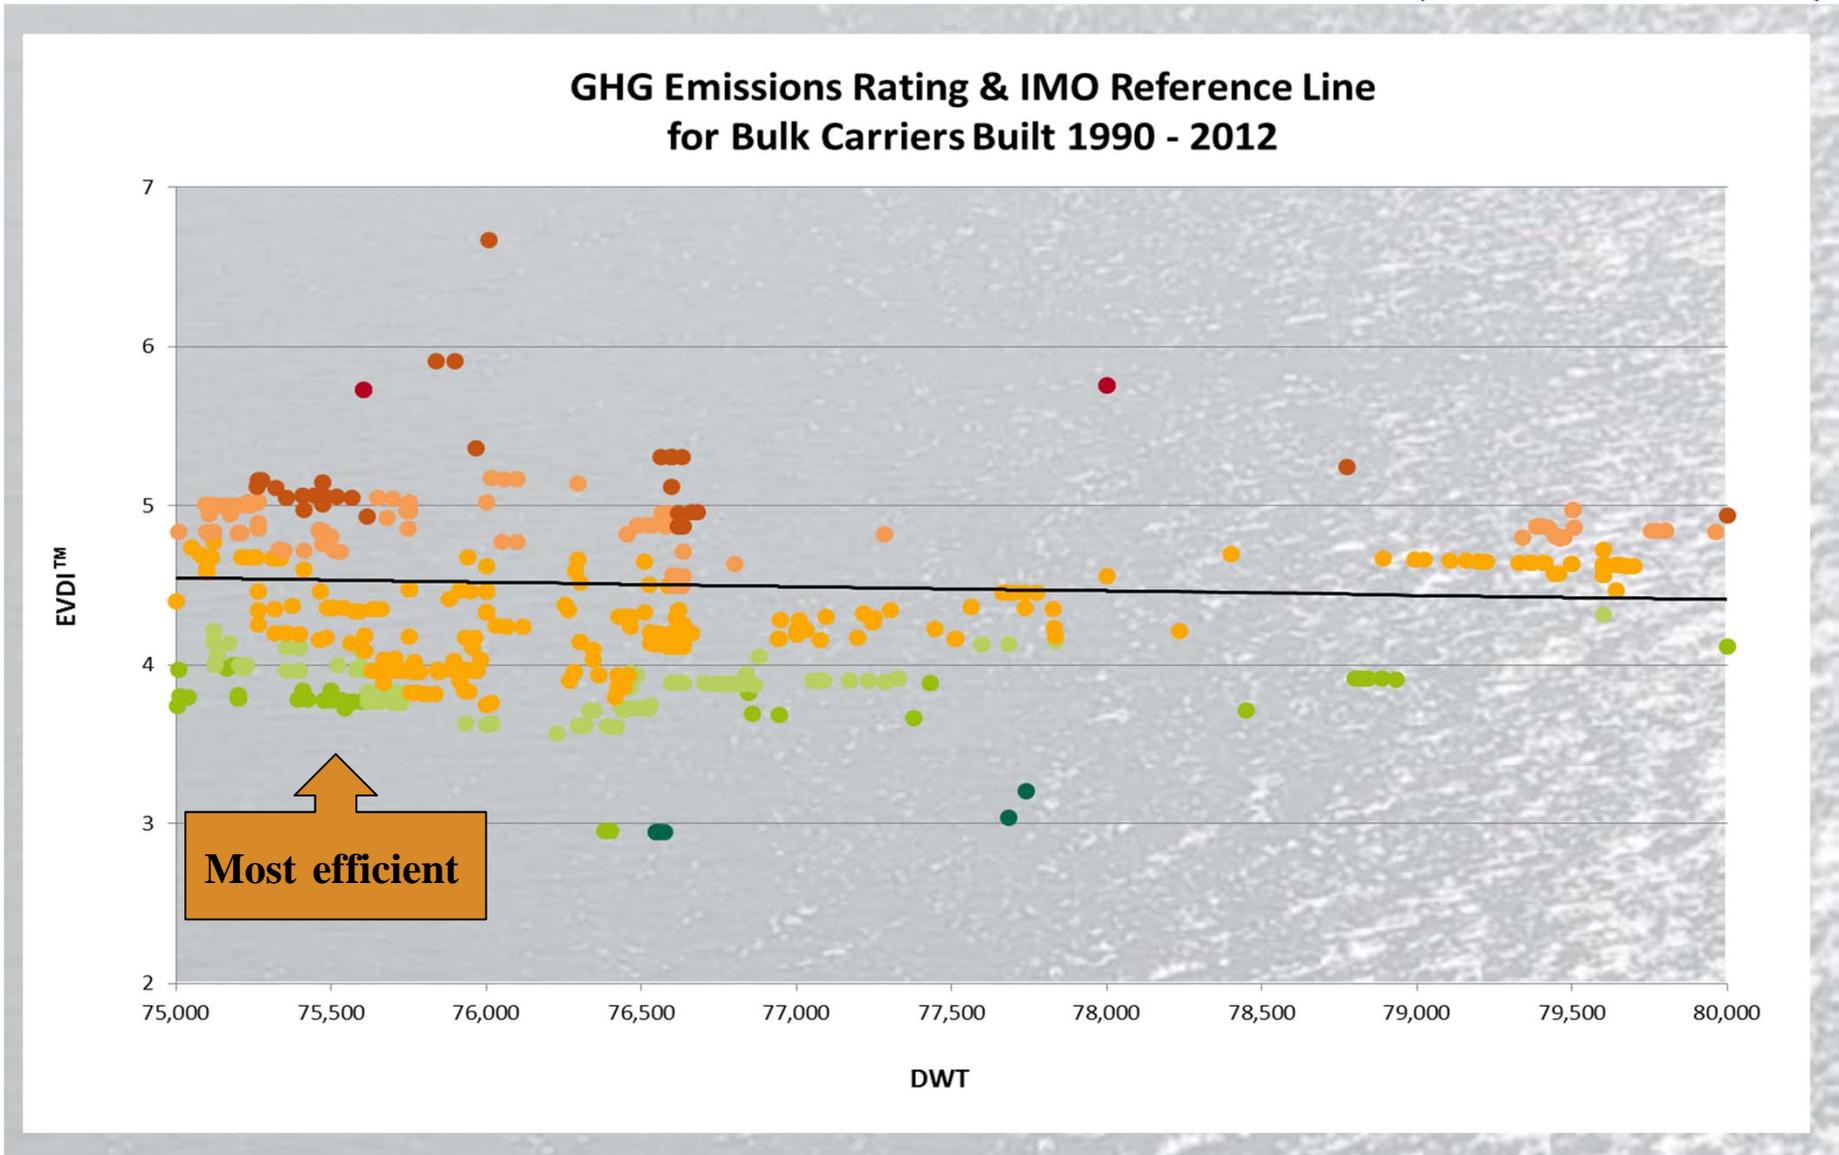

Age vs Performance

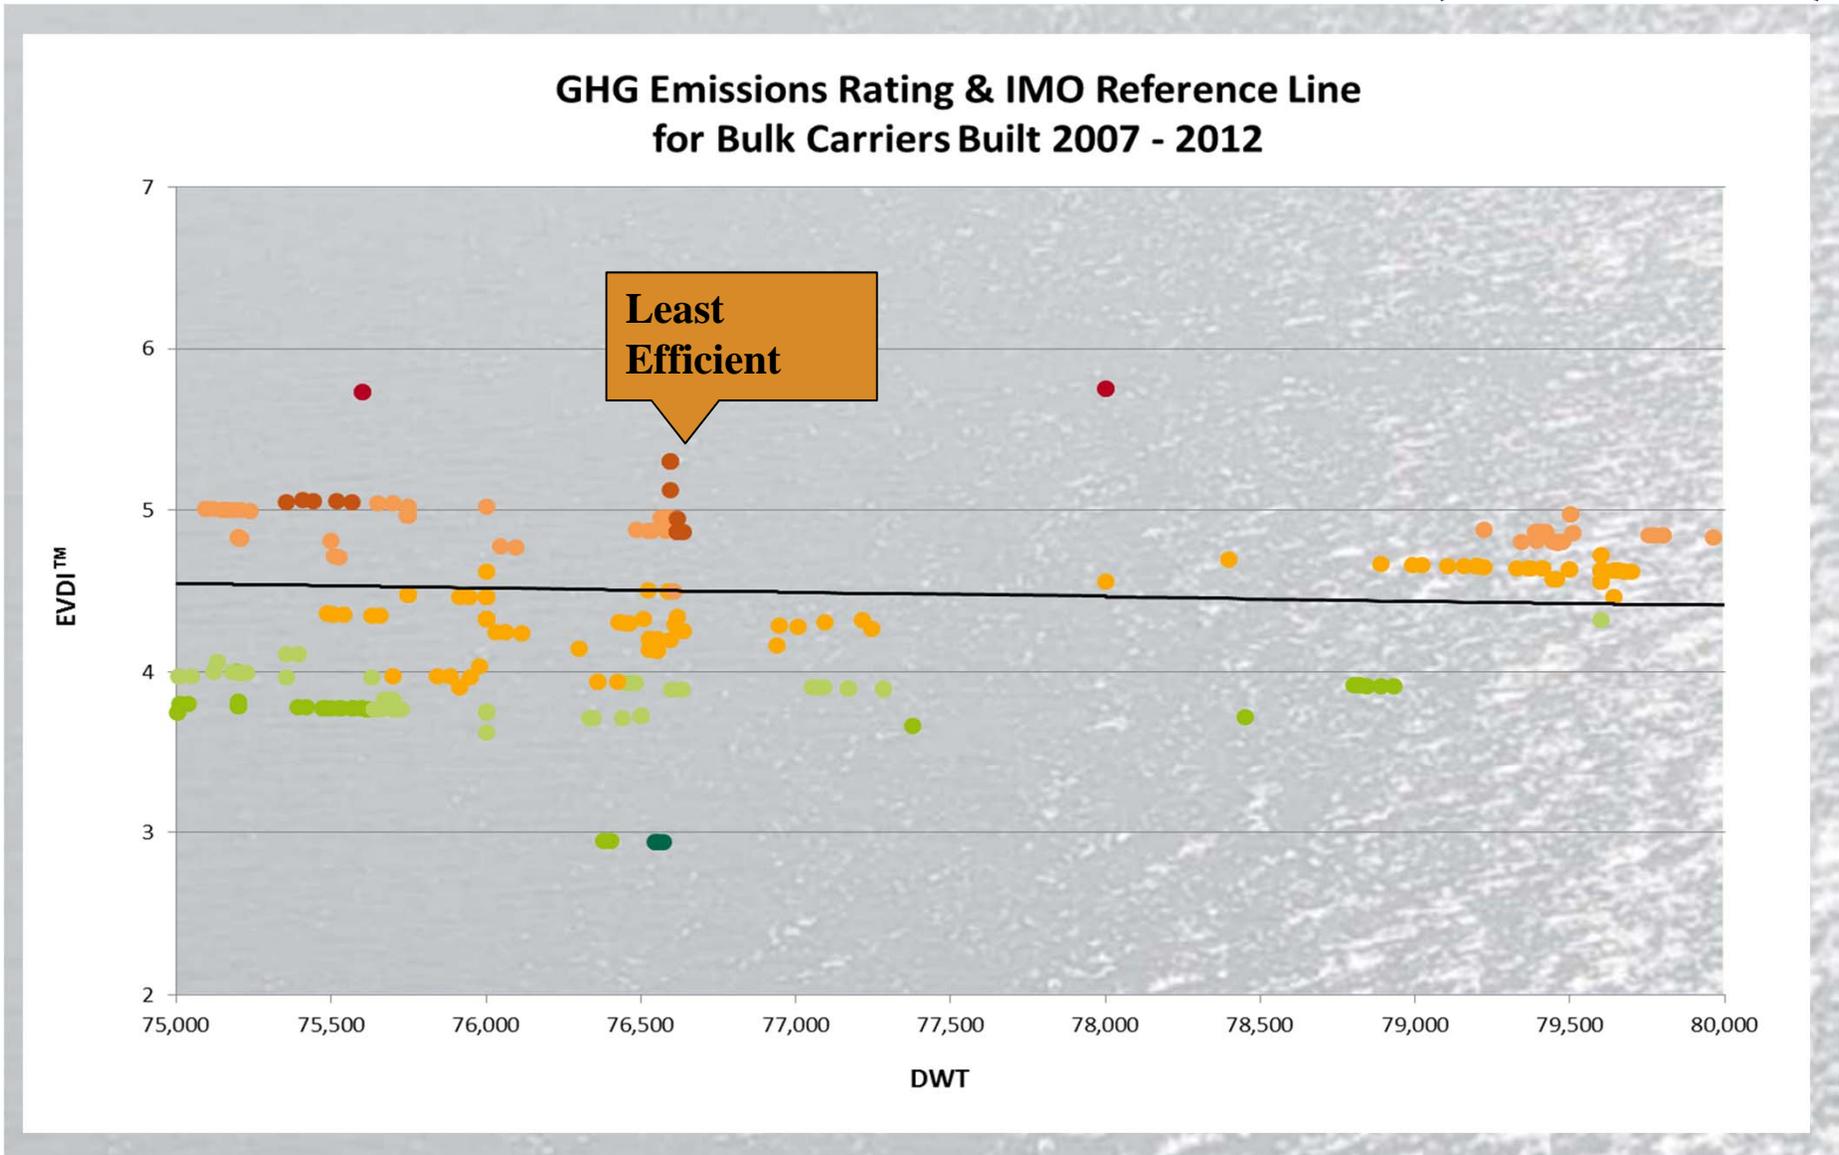

Bulk Carriers 75,000 - 80,000dwt vs Reference Line (1990 - 2012)

Bulk Carriers 75,000 - 80,000dwt vs Reference Line (2007- 2012)

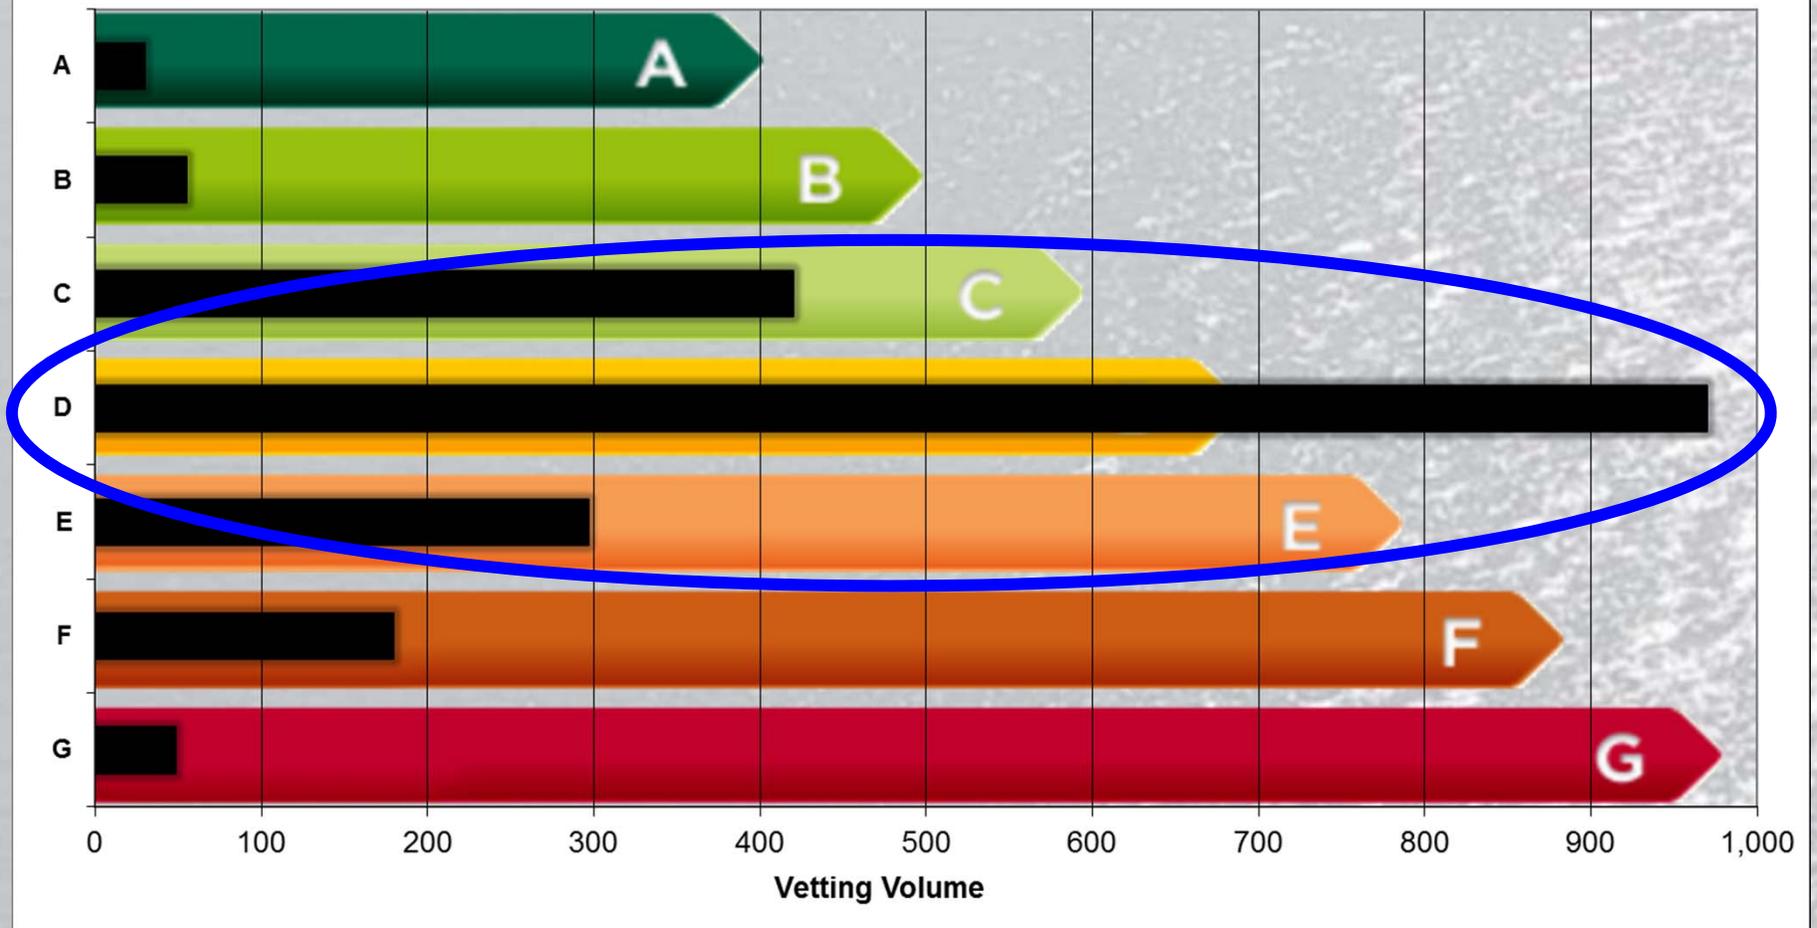

Practical Applications

For the Terminal

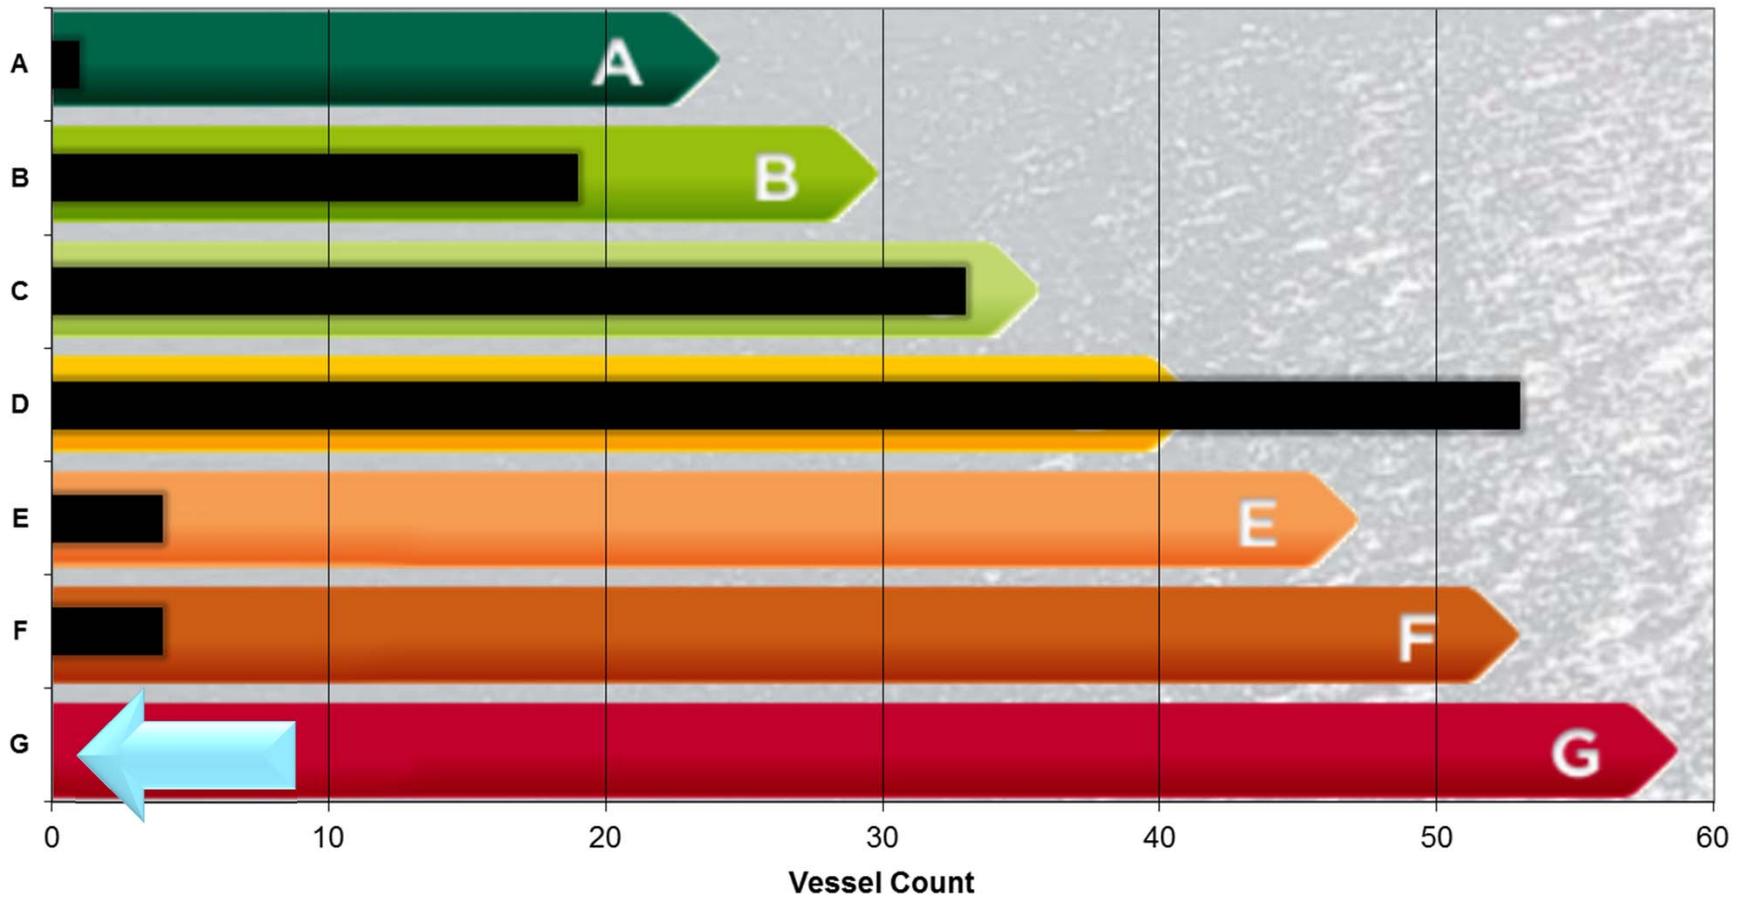

Sample Terminal
 GHG Emissions A - G Rating of Arrived Vessels
 1 January 2010 - 31 August 2011

For the Ship Owner

Sample Ship Owner Fleet
 GHG Emissions A - G Rating of In Service Fleet
 26 October 2011

Results so far

- Charterers
- Owners
- Terminals
- Finance companies
- Industry

Conclusions

- Emissions of the existing fleet already form part of the [decision making process](#)
- RightShip A - G Greenhouse Gas Emissions is a statistically valid means of determining relative efficiency of [existing tonnage](#)
- Promote [market solutions](#) through the logistics chain
- Welcome your feedback and input – www.shippingefficiency.org
