Performance Standards for Ballast Water Discharge

What are performance standards for ballast water discharge?
Performance standards set limits on how many organisms may be released in a specific volume of discharged ballast water. The specific limits are separated into organism size classes. **California’s standards are in the table to the right.**

<table>
<thead>
<tr>
<th>Organism Size Class</th>
<th>California’s Discharge Standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Larger than 50 µm (micrometer or one millionth of a meter) in minimum dimension</td>
<td>No detectible living organisms</td>
</tr>
<tr>
<td>10-50 µm in minimum dimension</td>
<td>Less than (&lt;) 0.01 living organisms per ml (milliliter)</td>
</tr>
<tr>
<td>Less than 10 µm in minimum dimension</td>
<td>Less than 10^3 (1,000) living bacteria per 100 ml</td>
</tr>
<tr>
<td></td>
<td>Less than 10^4 (10,000) living viruses per 100 ml</td>
</tr>
<tr>
<td></td>
<td>Less than 126 cfu (colony forming units) per 100 ml</td>
</tr>
<tr>
<td></td>
<td>Less than 33 cfu per 100 ml</td>
</tr>
<tr>
<td></td>
<td>Less than 1 cfu per 100 ml OR</td>
</tr>
<tr>
<td></td>
<td>Less than 1 cfu per gram of wet weight biological material</td>
</tr>
</tbody>
</table>

**Final discharge standard for California is zero detectable living organisms for all organism size classes, beginning January 1, 2020.**

Why is California implementing performance standards?
Performance standards will be more effective than ballast water exchange for minimizing the release of nonindigenous species. Studies have shown that the effectiveness of exchange can vary widely, depending on factors such as the biological richness of the source port and the configuration of ballast tanks. The California Legislature therefore directed the Commission to implement performance standards for ballast water discharges to better protect California’s waters from species introductions.

When will the performance standards go into effect in California?
Implementation will be phased, and will depend on:
1) The vessel’s year of construction (keel laid date), AND
2) The ballast water capacity of the vessel.

<table>
<thead>
<tr>
<th>Ballast Water Capacity of Vessel</th>
<th>Implementation for New Vessels (built on or after Jan 1 of years below)</th>
<th>Implementation for Existing Vessels (Jan 1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 1500 MT (metric tons)</td>
<td>2016</td>
<td>2018</td>
</tr>
<tr>
<td>1500-5000 MT</td>
<td>2016</td>
<td>2016</td>
</tr>
<tr>
<td>Greater than 5000 MT</td>
<td>2016</td>
<td>2018</td>
</tr>
</tbody>
</table>

How will vessels meet California’s performance standards?
There are several potential strategies:
1) Retention of all ballast water on board (most protective option);
2) Treat all ballast water to be discharged in California with a ballast water treatment system;
3) Discharge to a reception facility (none currently exist).

Revised 10/14/2013
Will the California State Lands Commission approve ballast water treatment systems?

No. Vessel owners/operators should work closely with treatment system vendors to determine what system is most appropriate for the type and routing of their vessels.

When performance standards go into effect, California State Lands Commission Marine Safety Inspectors will check, BWM log book, BWM Plan, applicable reporting forms, and vessel discharges to ensure compliance with the performance standards. Treated discharges must also comply with all applicable environmental and water quality laws, regulations and permits.

Reporting Discharge of Treated Ballast in California

If vessels opt to use shipboard ballast water treatment systems to comply with California’s performance standards, vessels must submit a Ballast Water Treatment Supplemental Reporting Form (Supplemental) upon departure from each port or place of call in California if ballast water was treated and discharged into California waters. In addition, vessel that have ballast water treatment systems and discharge treated ballast into California waters must annually submit a Ballast Water Treatment Technology Annual Reporting Form (Annual). Both Supplemental and Annual reporting forms can be obtained on the Marine Invasive Species Program website under “Compliance and Reporting Documents.” See “Where can I find more information?” below.

Where do I submit the Annual and Supplemental reporting forms

Email: BWForm@slc.ca.gov
Fax: 562-499-6444

Where can I find more information?

Internet: www.slc.ca.gov
• Click on the “Divisions” tab
• Select “Marine Facilities Division”
• Select “Marine Invasive Species Program”

Email: Nicole.Dobroski@slc.ca.gov • Telephone: 916-574-0742

California Code of Regulations

Title 2, Division 3, Chapter 1, Article 4.7. Performance Standards for the Discharge of Ballast Water For Vessels Operating in California Waters

Revised 10/14/2013
