PROPOSED AUTHORIZATION:

PROPOSED PROJECT:

ERSE Corporation will prospect for valuable
minerals by hand sampling beach sediments on

ocean floor. No machinery will be used and access to the beach will be by using existing means. Sampling will be scheduled over several months and at times to minimize any conflicts with other beach users.

Water depth averages 10 feet with a maximum of 30 feet in the project area, so only a small boat will be used for support of the divers and to bring samples to shore.

Samples will be processed at an existing onshore facility to determine the feasibility of the extraction of titanium metal from ilmenite in the sediments.

Any proposed activity not authorized by this permit will not proceed without prior approval of a project amendment processed pursuant to the requirements of CEQA. If commercial mining operations are proposed, appropriate environmental documentation will be prepared and certified prior to issuing a mineral extraction lease.

ROYALTY:

Royalty payable under the permit shall be 20 percent of the gross value of the minerals secured from the permit area and sold or otherwise disposed of or held for sale or other disposition.

PREREQUISITE ITEMS:

1. Required statutory filing fee, expense deposit and acreage deposit have been submitted by the applicant.
2. Subject parcel is not known to contain a commercially valuable deposit of minerals.
3. Royalty payable under any preferential lease issued shall be a percentage, to be determined by the Commission, of the net profits derived from mineral extraction operations under the lease. The determination of said royalty shall be at the discretion of the Commission and set forth in said lease.
