**OTHER PERTINENT INFORMATION:**

1. This activity involves lands identified as possessing significant environmental values pursuant to P.R.C. 6370, et seq. Based upon the staff's consultation with the persons nominating such lands and through the CEQA review process, it is the staff's opinion that the project, as proposed, is consistent with its use classification.
2. A major environmental concern with dredging activities at Lake Tahoe centers on the potential cumulative effects of nutrient release from sediments into the Lake as a result of the dredging of previously undisturbed areas of the lake bed. As previously indicated, in 1977 Sunnyside Marina received authorization from the Corps of Engineers and TRPA to dredge the entrance to 6,215 Lake Tahoe Datum (LTD) and in 1978, the area within the marina to 6,219 LTD and remove up to 1,500 cubic yards of material. In the intervening years, sedimentation of these areas has occurred. The application requests authorization to remove 1,500 cubic yards of material to achieve and maintain the levels previously authorized. Therefore, since no new disturbance of the lake bed will occur, neither the associated release of nutrients to the Lake nor the potential cumulative impacts associated therewith will occur. The project also contains within it, procedures to maintain water quality in the lake by containing turbidity within the area to be dredged.
3. Pursuant to the Commission's delegation of authority and the State CEQA Guidelines (14 Cal. Code Regs. 15061), the staff has determined that this activity is exempt from the requirements of the CEQA as a categorically exempt project. The project is exempt under Class 4(g), Maintenance Dredging, where the material is deposited in a disposal area authorized by all applicable State and Federal regulatory agencies, 14 Cal. Code Regs. 15304.

Authority: P.R.C. 21084 and 14 Cal. Code Regs. 15300.
