Applied Science Associates, Inc.

**James R. Payne, Ph.D.**

Payne Environmental Consultants, Inc.

# Why Consider Dispersants?

- Aerial application of dispersants can mitigate large amounts of oil if treated promptly.
  - Mitigate -- reduce the overall impact of an oil spill to the environment as a whole.
  - However, dispersant use is a **trade-off** with increased risks to the water column balanced against reduced injury to surface water and shoreline resources.

# Dispersant Use in California

## PAST:

- Quick-approval process (RRT)
- Hesitation to use dispersants
- Concerns about effectiveness and impacts
- Limited equipment and supplies

# Dispersant Use in California

## NOW:

- Pre-approval zones
- Quick-approval zones (through RRT)
- California Dispersant Use Plan
- Equipment & supplies
- Education
- Acceptance of dispersants
- USCG SMART

Future use of dispersants in CA likely

# **The DOMP**

- **OPA 90 and Lempert Keene Seastrand 90 require NRDA**
- **California Dispersant Use Plan:  
Dispersant Application only if:  
“Net Environmental Benefit”**
- **Development of Dispersed Oil Monitoring Plan (DOMP) to quantify impact**

# California Dispersed Oil Monitoring Plan (DOMP)

## Principle investigators:

- R. Lewis
- Dr. W. Nordhausen
- Dr. D. French McCay
- Dr. J. Payne

## Collaborators:

- Y. Addassi
- M. Sowby
- Dr. J. Cubit
- Dr. H. Parker Hall

# California Dispersed Oil Monitoring Plan (DOMP)

## Objectives

- Develop a plan to quantify and evaluate impacts to aquatic organisms after a spill where dispersants are used
- Provide data for NRDA
- Evaluate effects for decision making for future spills

# Dispersed Oil Monitoring Plan

## HOW ?

- Quantity (size of dispersed oil plume)
- Components (dissolved-phase & oil droplets)
- Concentration
- Duration
- Environmental impact
- Documentation

→ Sampling plan

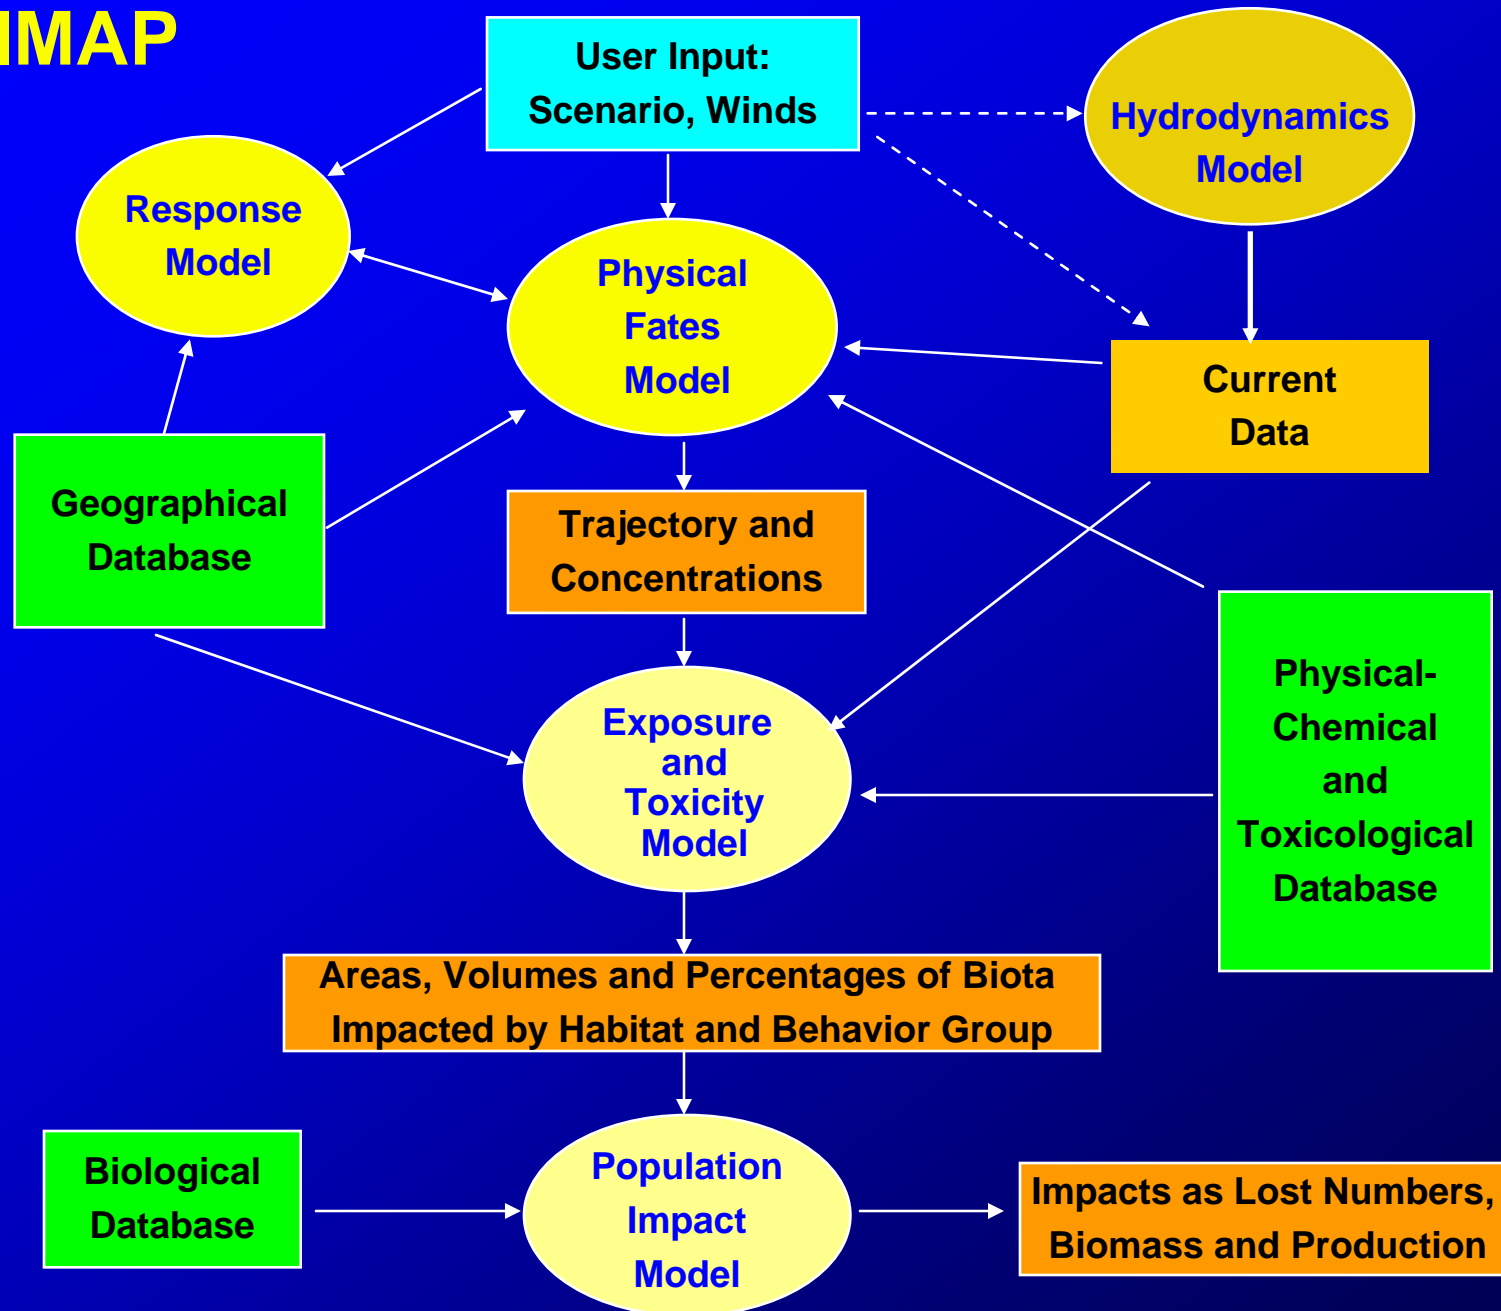

# Dispersed Oil Monitoring Plan

Our approach...

- Computer simulations using ASA's Spill Impact Model Application Package (SIMAP)
- Prepare sampling plan based on simulation results
- Field test sampling plan
- Prepare standby equipment & retain contractors

# SIMAP

# Potential Impacts of Oil Spills

- **Surface smothering/coating exposure**
  - Wildlife (birds, marine mammals, sea turtles)
  - Shorelines
  - Nearshore structured habitats (wetlands, mangroves, seagrasses, coral and mollusk reefs)
- **Subsurface toxicity (soluble aromatics)**
  - Direct on fish, invertebrates, algae
  - Indirect via food web
  - Submerged aquatic habitats

# Modeling Matrix

- Hypothetical spills in open water (similar all locations under same environmental conditions)
- Oil type: Light Arabian crude
- Spill volume: **maximum volume of oil dispersed** by a single sortie of a C-130 (80%, 45% or 20% efficiency)
- Oil thickness: median value for dispersant application (100  $\mu\text{m}$ )
- 3 dispersant application scenarios: none; after weathered 8 hrs, 16 hrs
- 2 wind speed and associated turbulence conditions
  - 5 kts (2.5 m/s), 1  $\text{m}^2/\text{s}$
  - 15 kts (7.5 m/s), 10  $\text{m}^2/\text{s}$
- Restricted to surface mixed layer: 10m, 20m
- Background currents: none, 0.25 kts (13 cm/s) downwind, 0.25 kts (13 cm/s) upwind

## Initial Conditions

- 5,000 gal (18.9 m<sup>3</sup>) of dispersant
- 20:1 oil : dispersant ratio
- 100,000 gal (2381 bbl = 378.5 m<sup>3</sup> = 326 tonnes) oil treated
- Properties for pre-weathered oil (8 or 16 hrs in 5 kt winds)
- Since 100 μm thick, initially circle with area = 3.8 km<sup>2</sup>
- 80%, or 45% or 20% of oil dispersed in 0.5 hr

# Trajectory and Concentrations: Examples

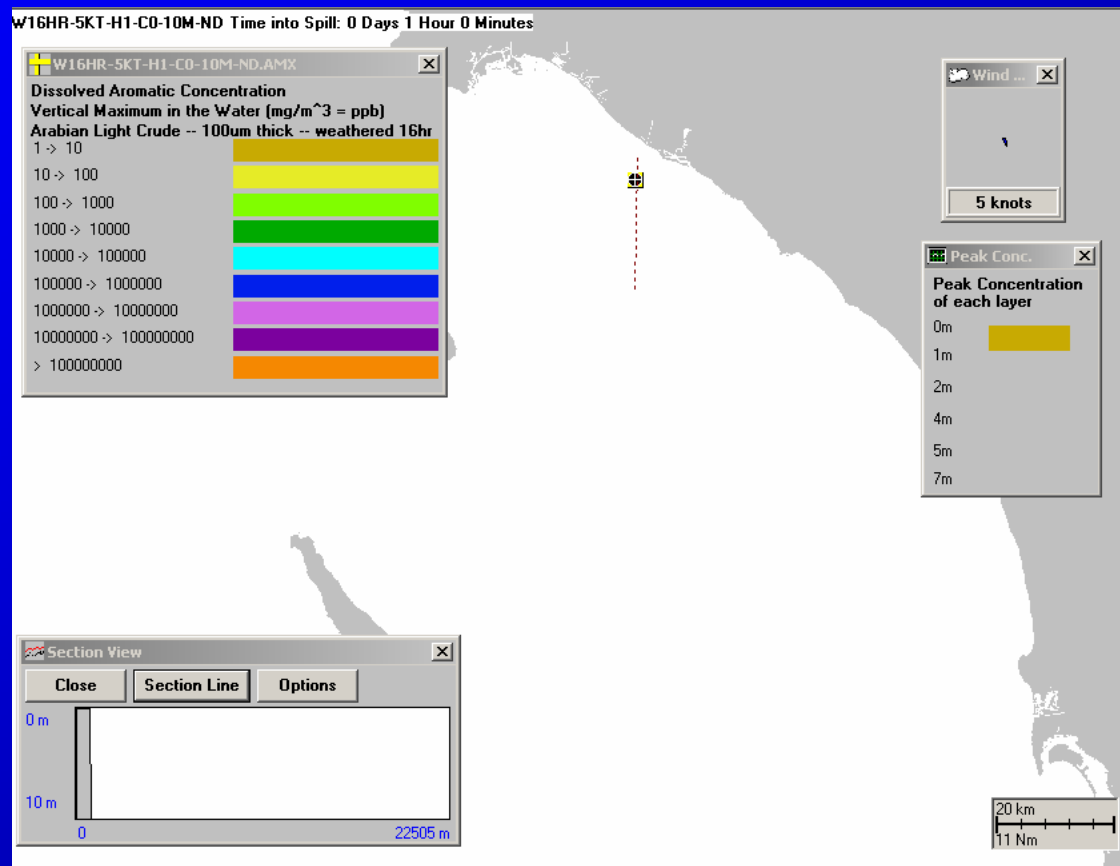

- 5 kt (2.5 m/s) winds, no dispersant
- 5 kt (2.5 m/s) winds, with dispersant

**Dispersant: none;**

**Wind from NNW 5 kts; Currents: 0 kt;  
Turbulent mixing to 10m deep:**

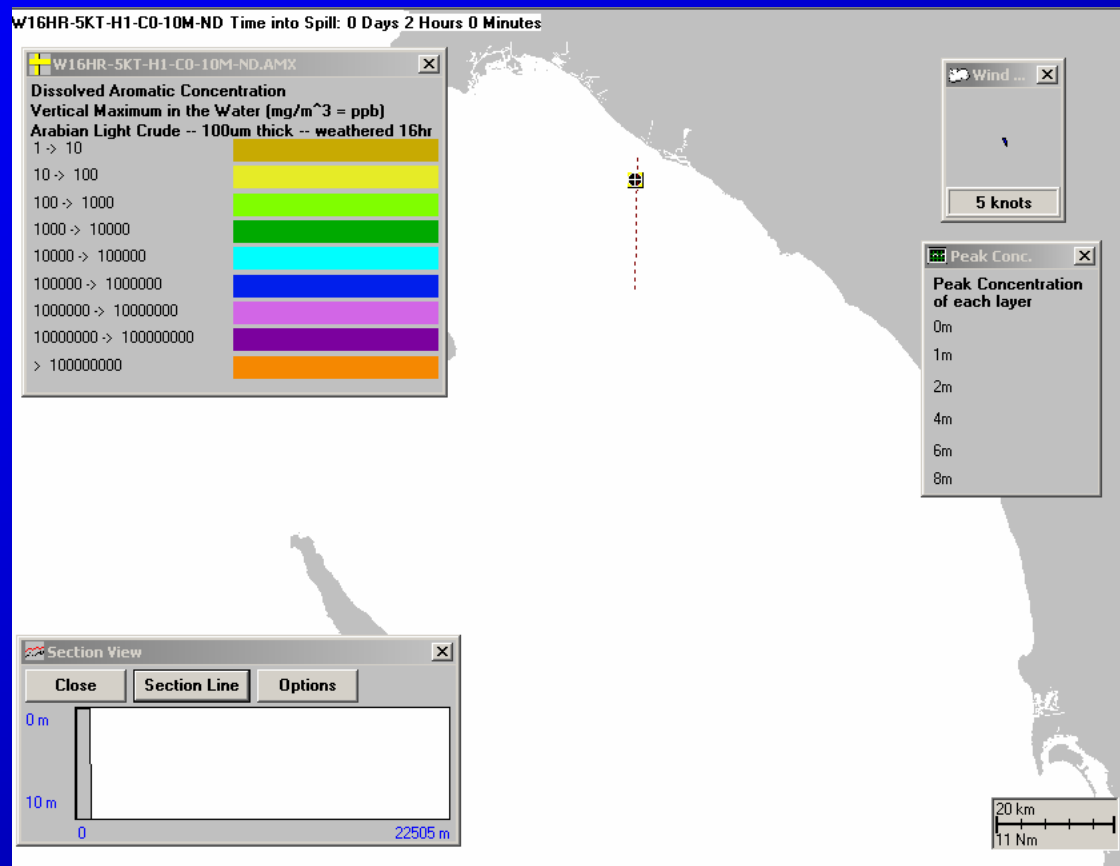

**Dissolved Aromatic Concentrations**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: none; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 1 hr after potential treatment**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: none; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 2 hrs after potential treatment**

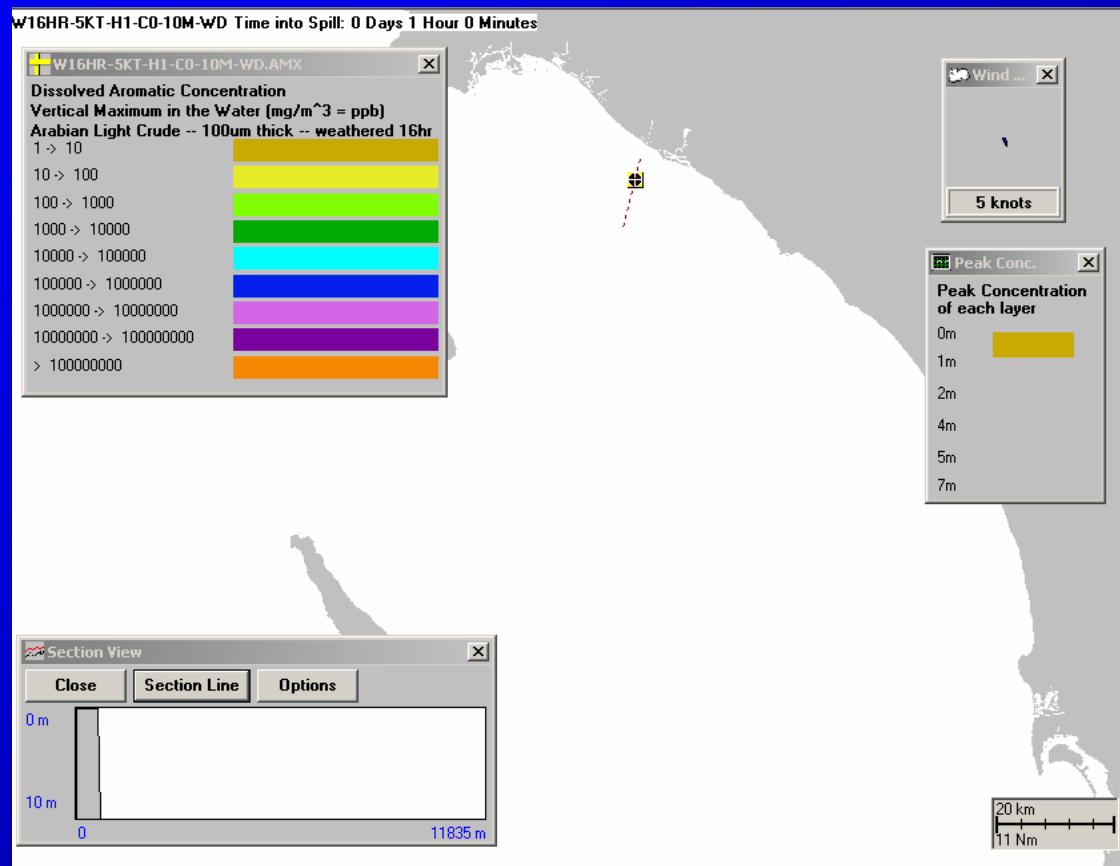

**\*No dissolved aromatic conc. > 1ppb (averaged) in any grid cell after 2 hrs**

**Dispersant: at 16 hrs;**

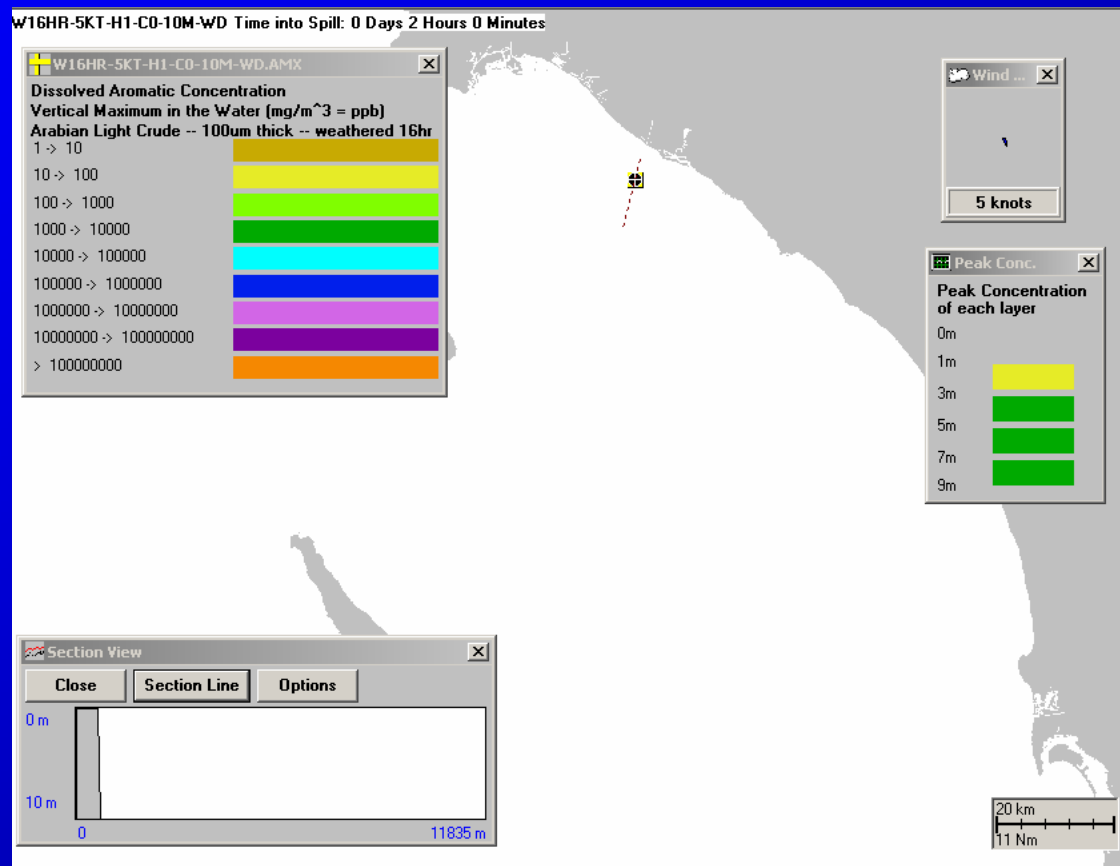

**Wind from NNW 5 kts; Currents: 0 kt;  
Turbulent mixing to 10m deep;**

**Dissolved Aromatic Concentrations**

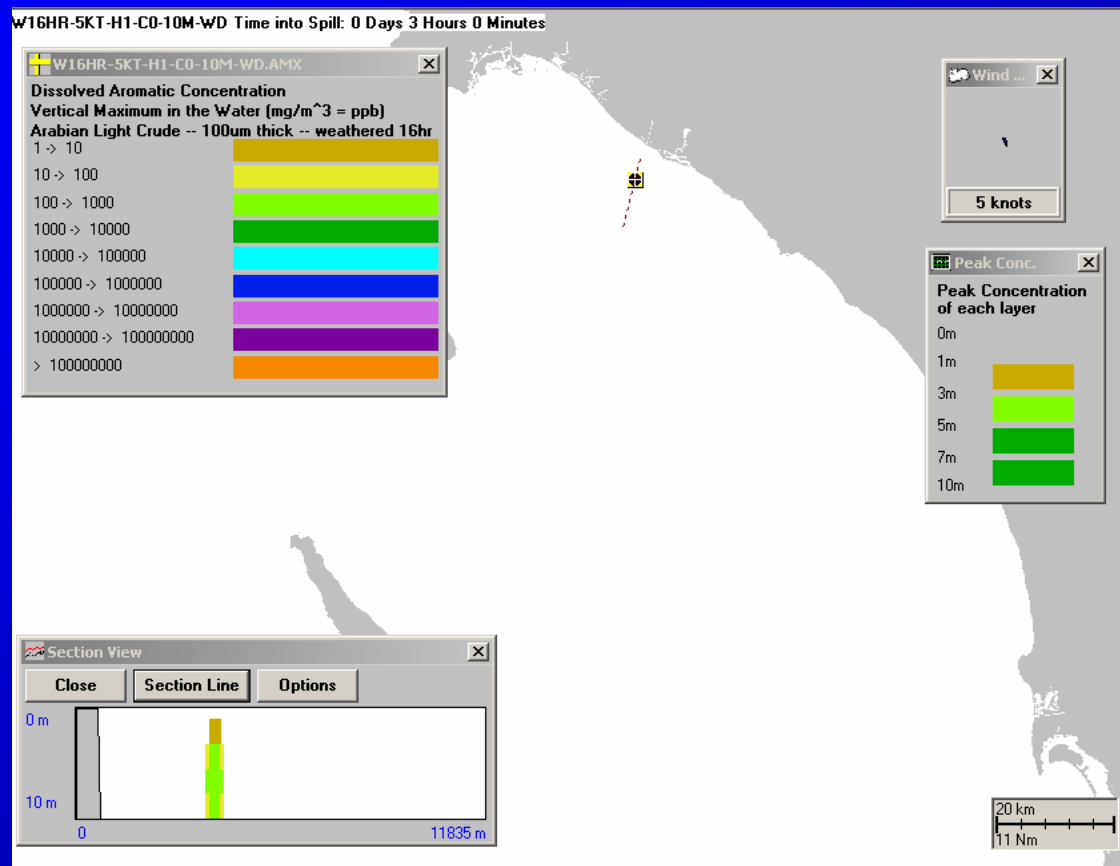

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 1 hr after dispersant application**

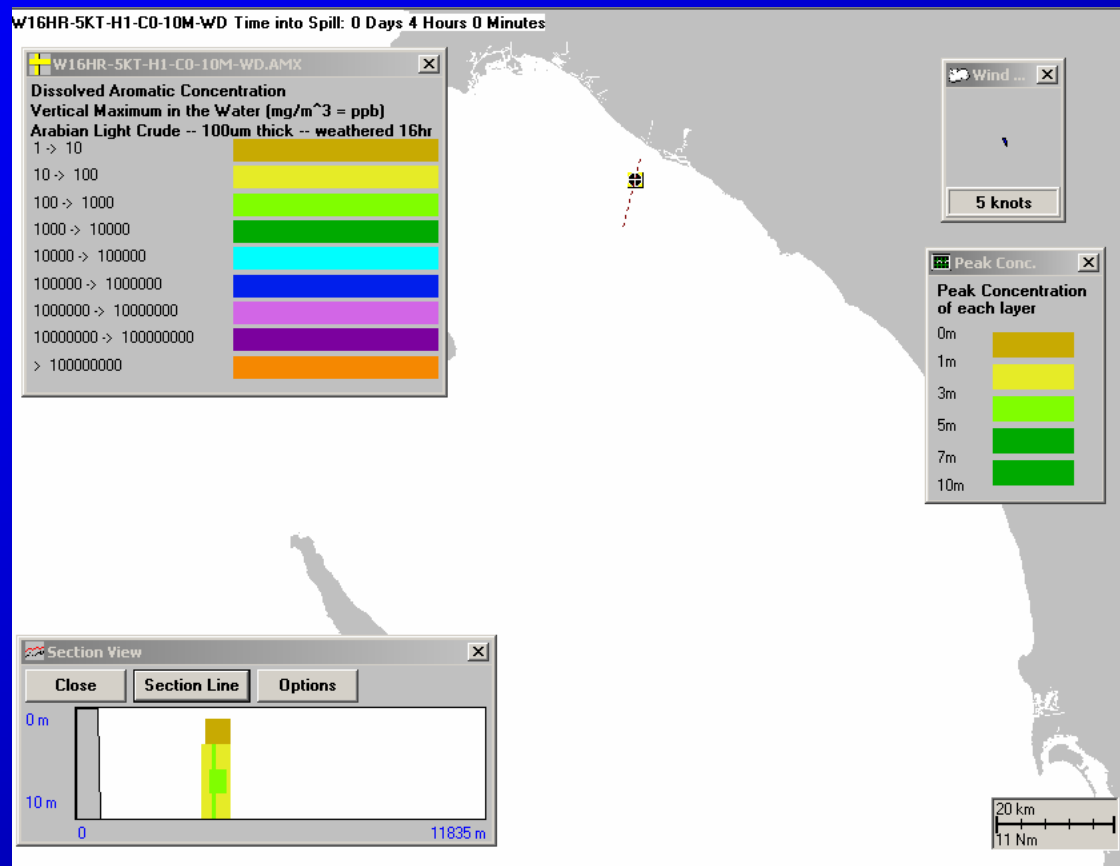

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 2 hrs after dispersant application**

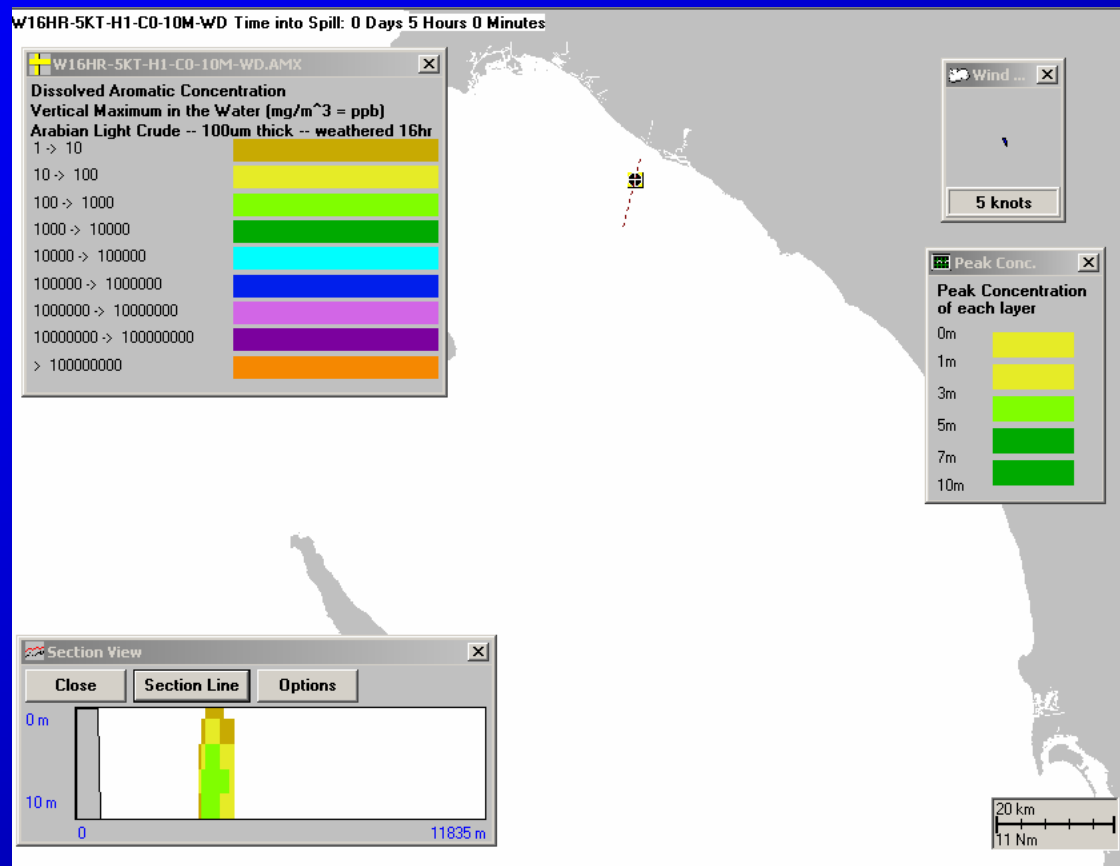

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 3 hrs after dispersant application**

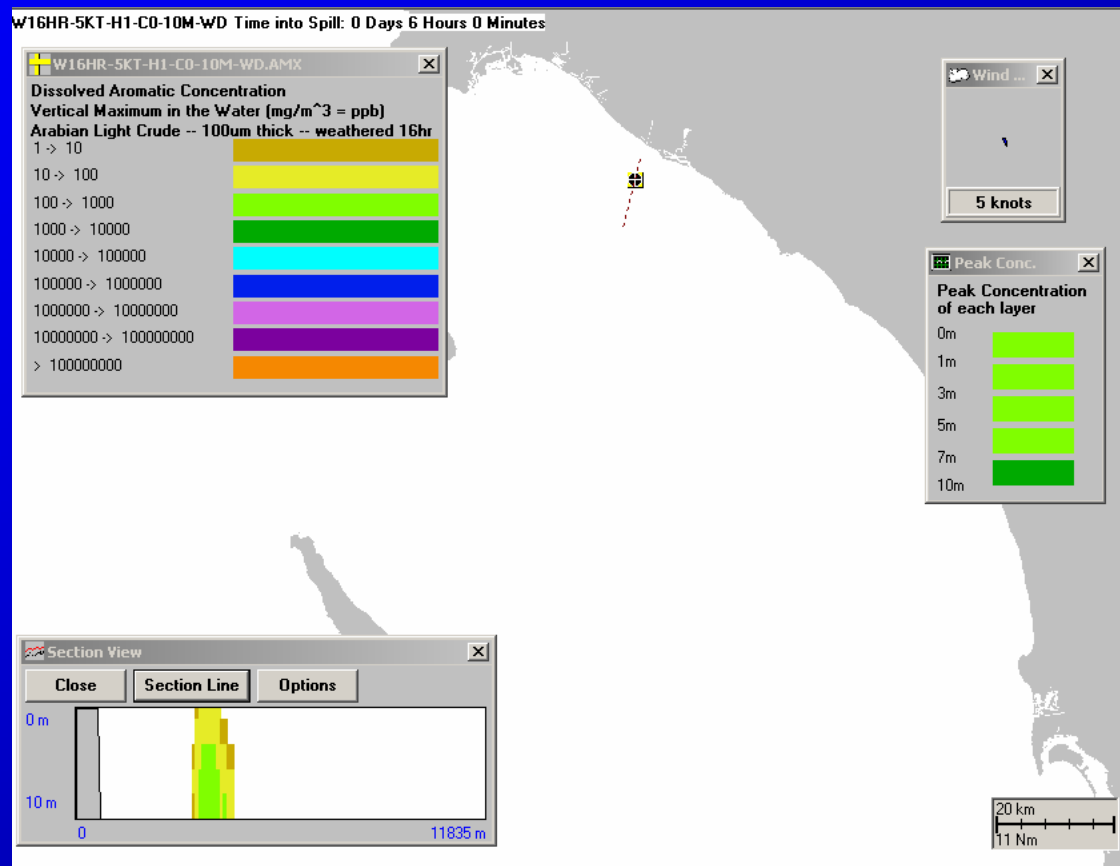

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 4 hrs after dispersant application**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 5 hrs after dispersant application**

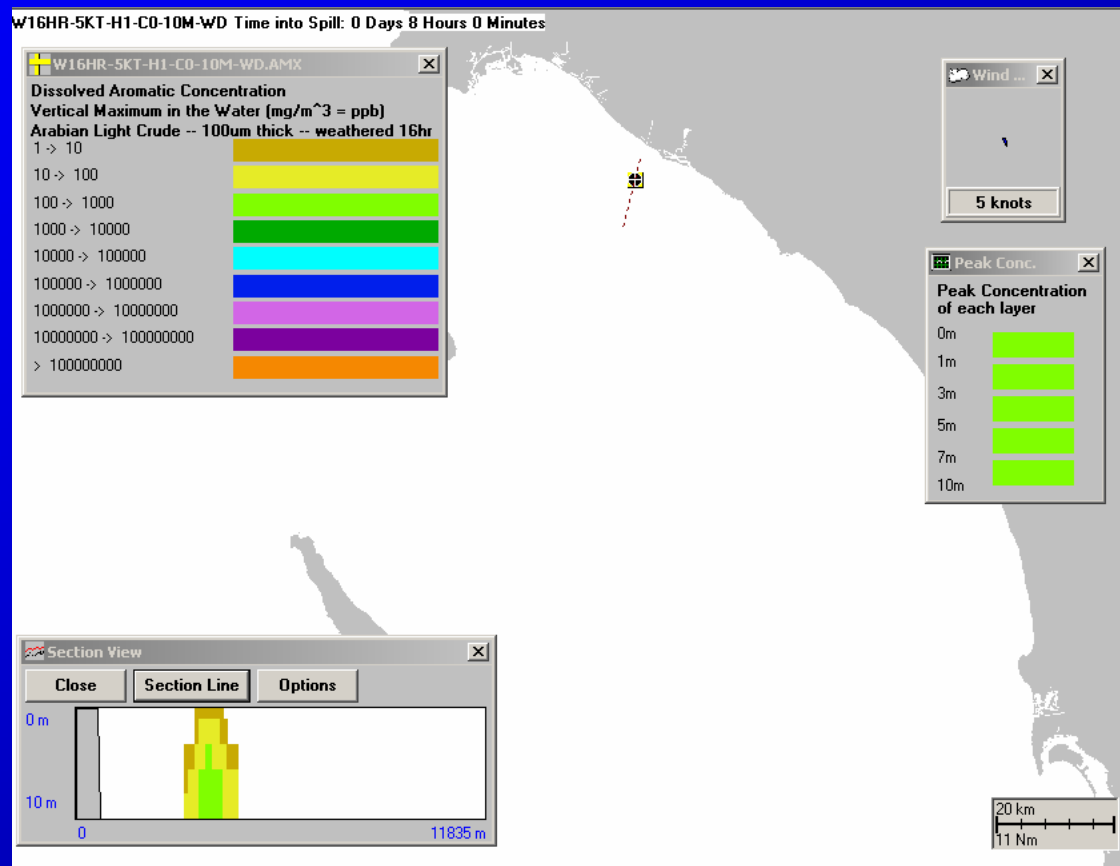

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 6 hrs after dispersant application**

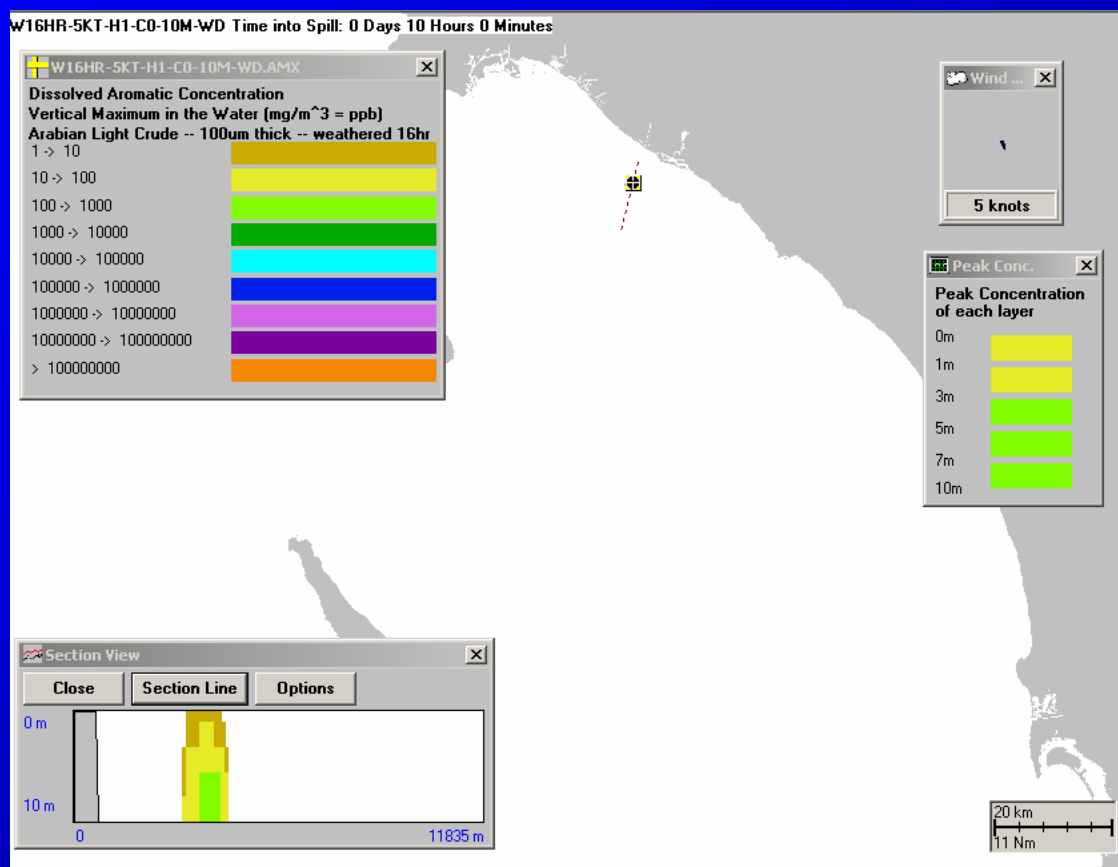

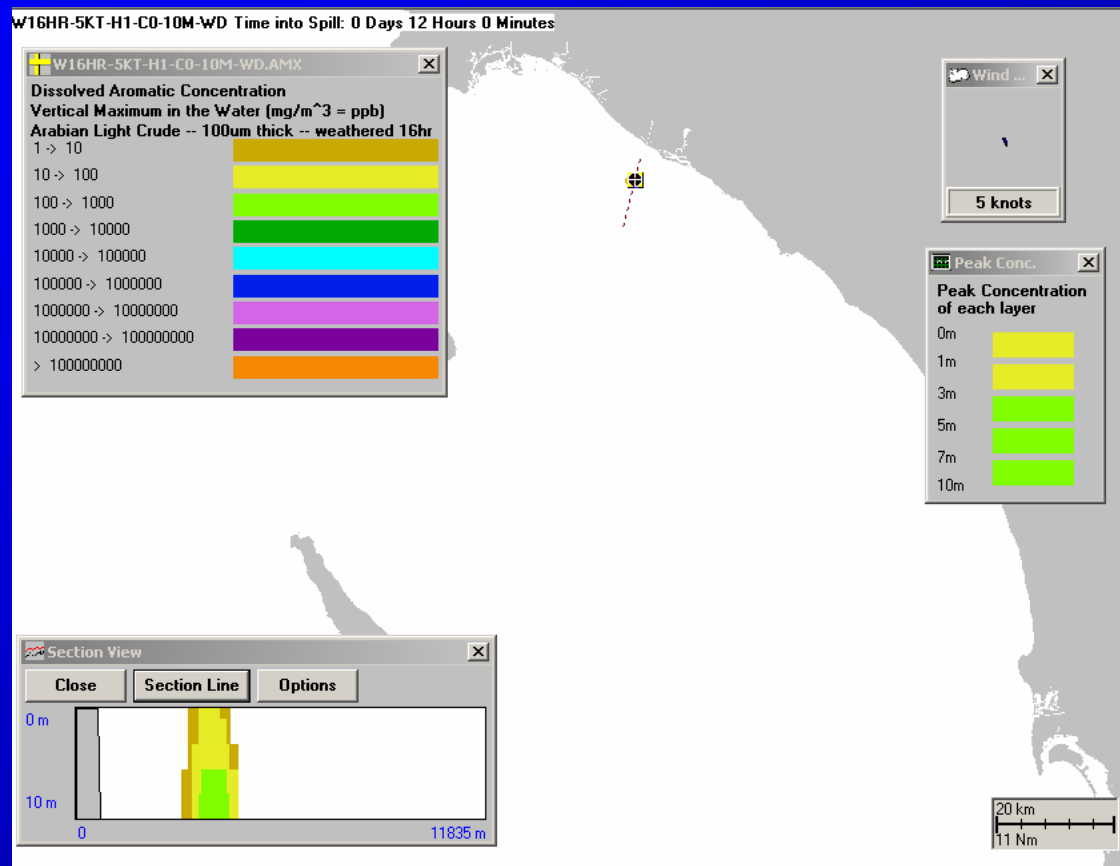

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 8 hrs after dispersant application**

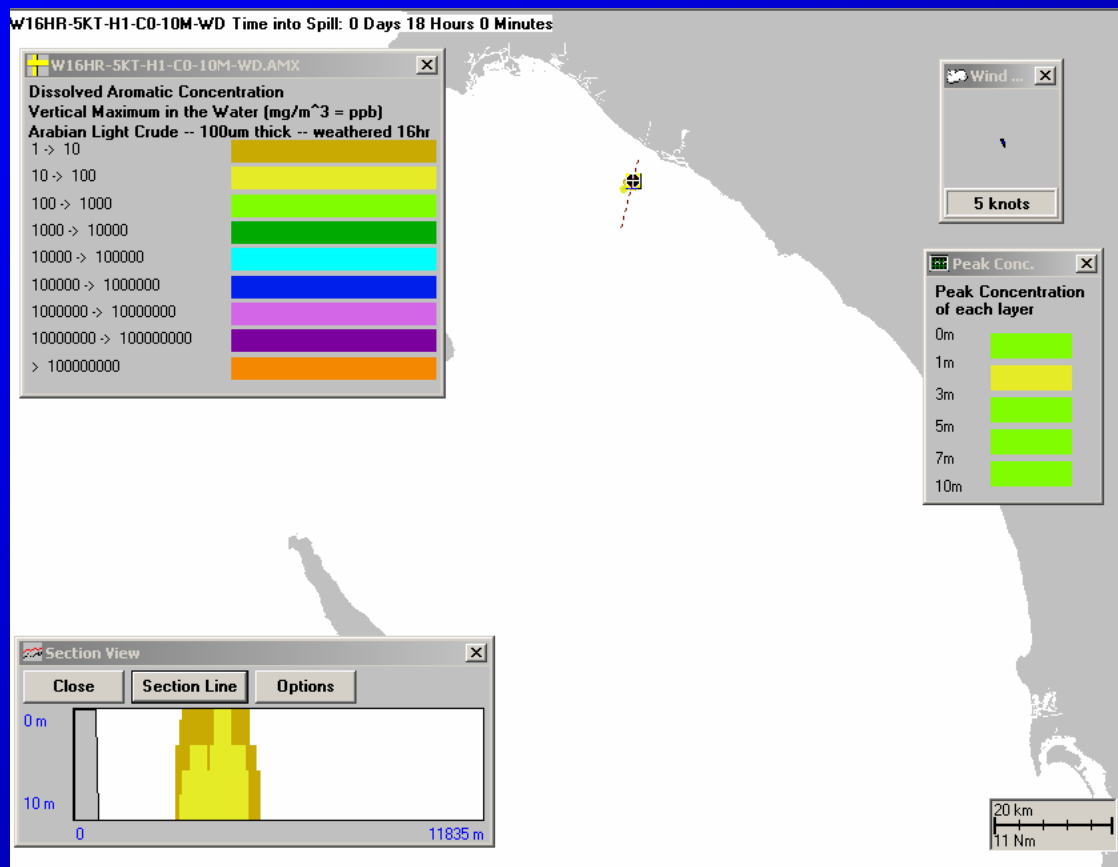

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 10 hrs after dispersant application**

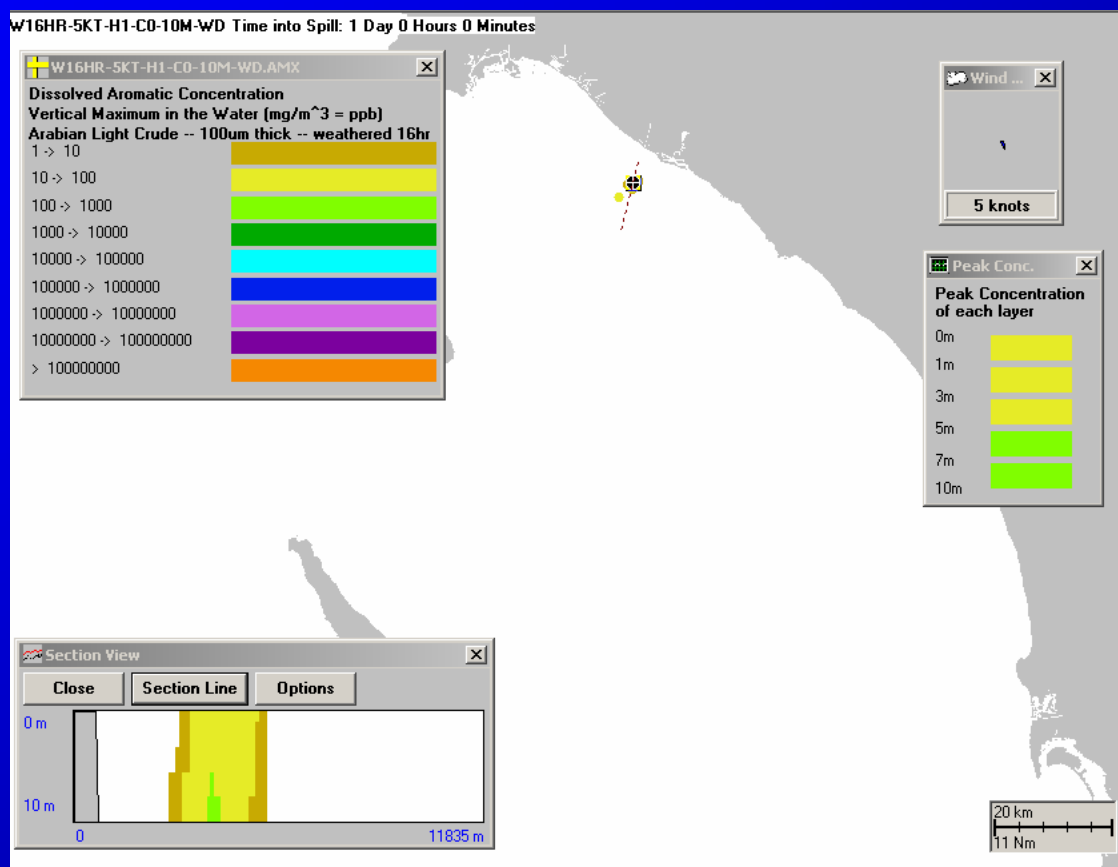

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 12 hrs after dispersant application**

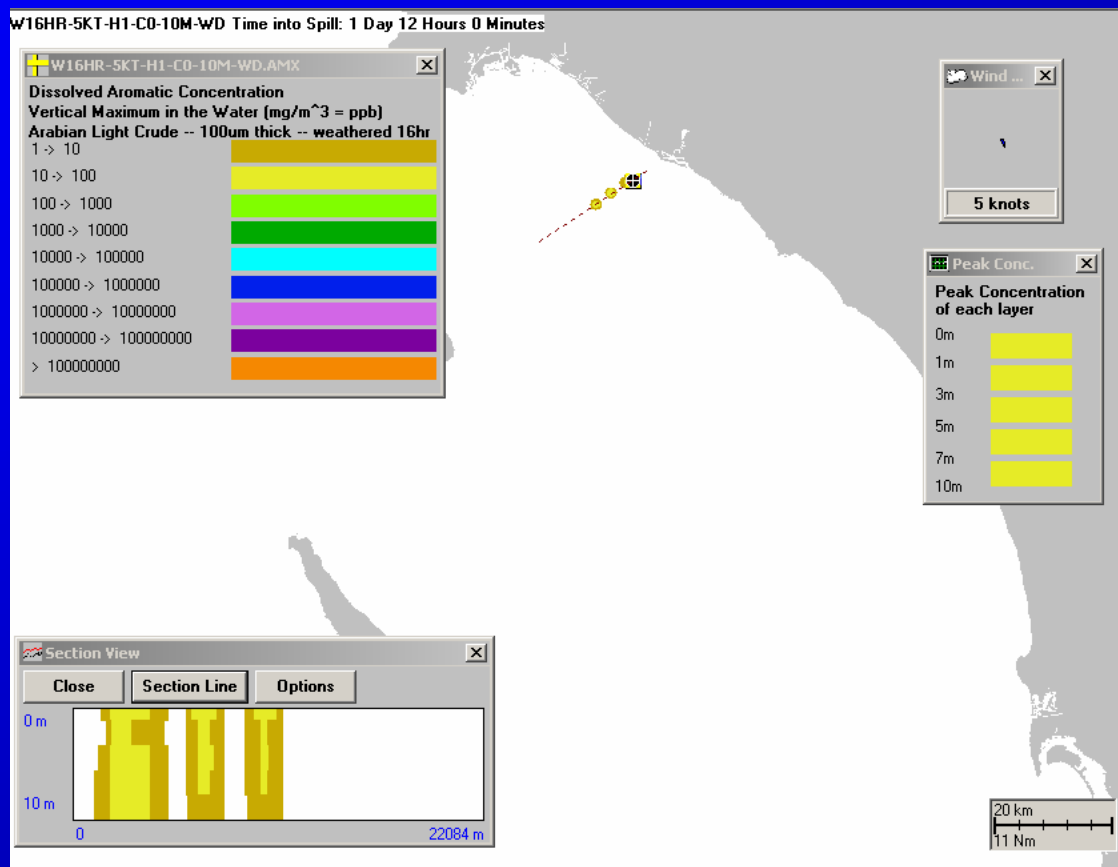

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 18 hrs after dispersant application**

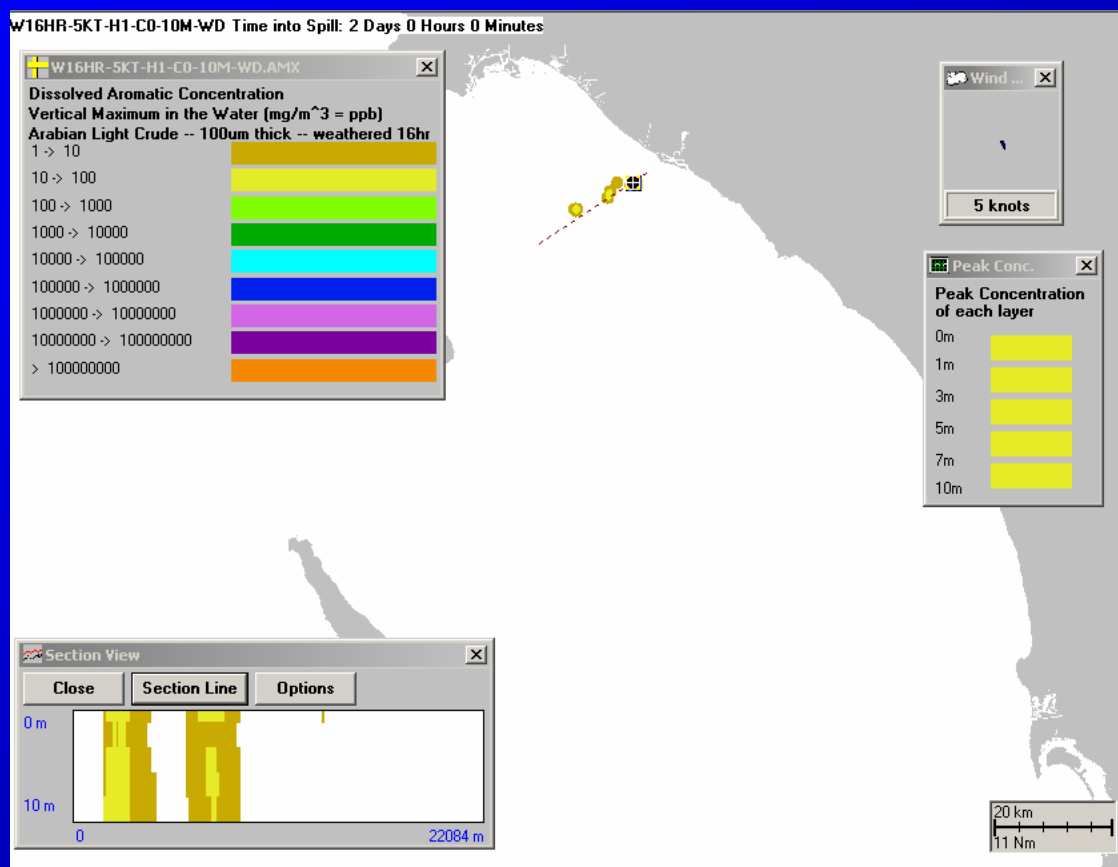

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 24 hrs after dispersant application**

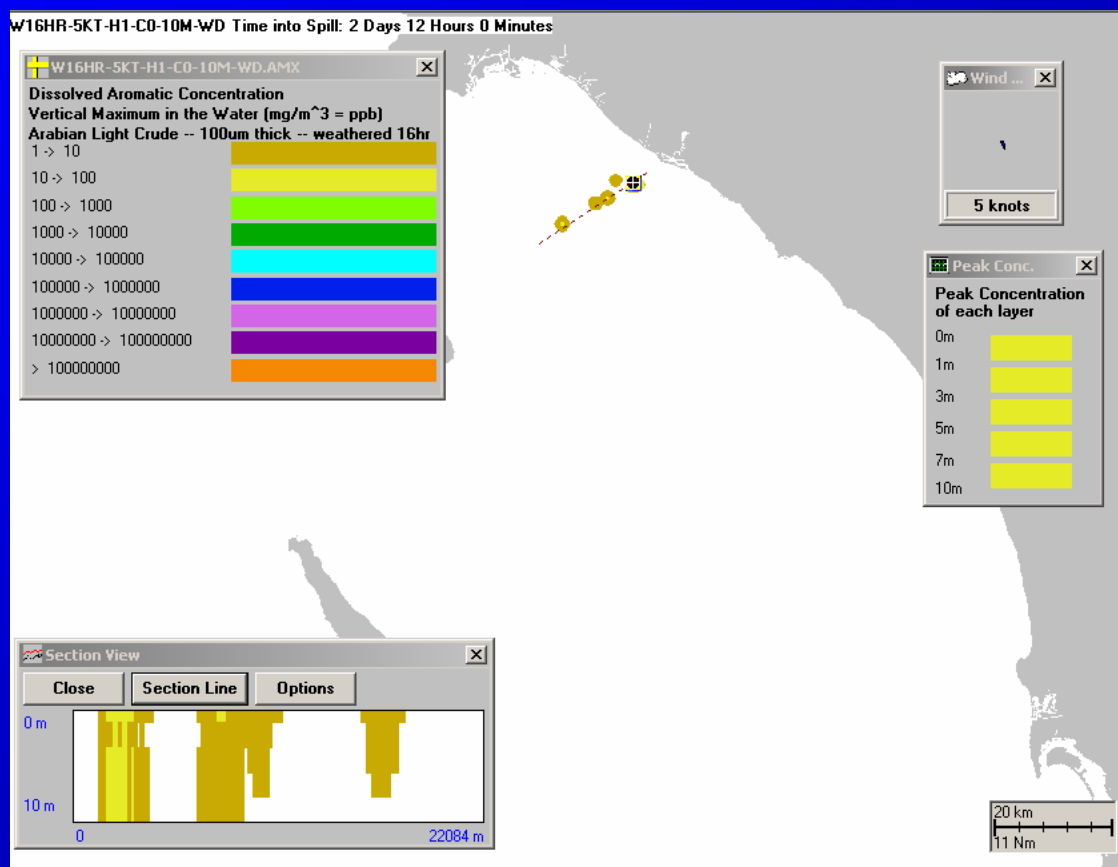

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 36 hrs after dispersant application**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 48 hrs after dispersant application**

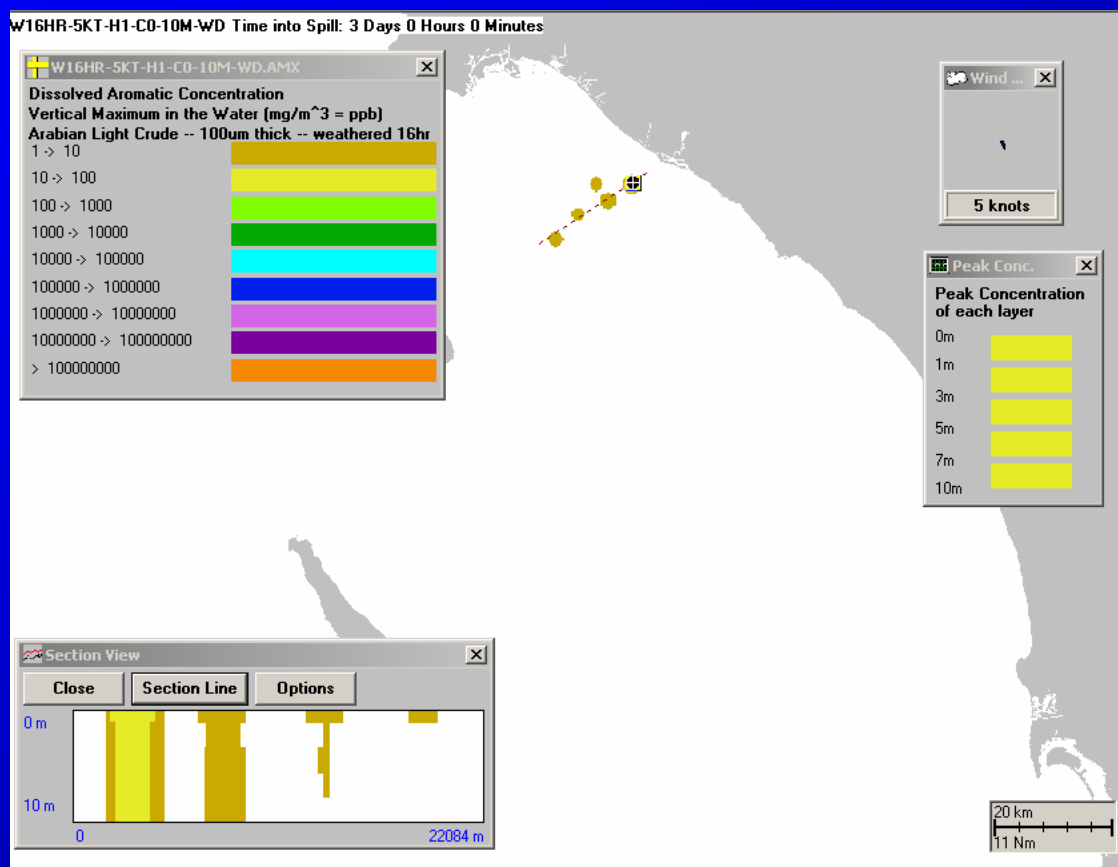

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 60 hrs after dispersant application**

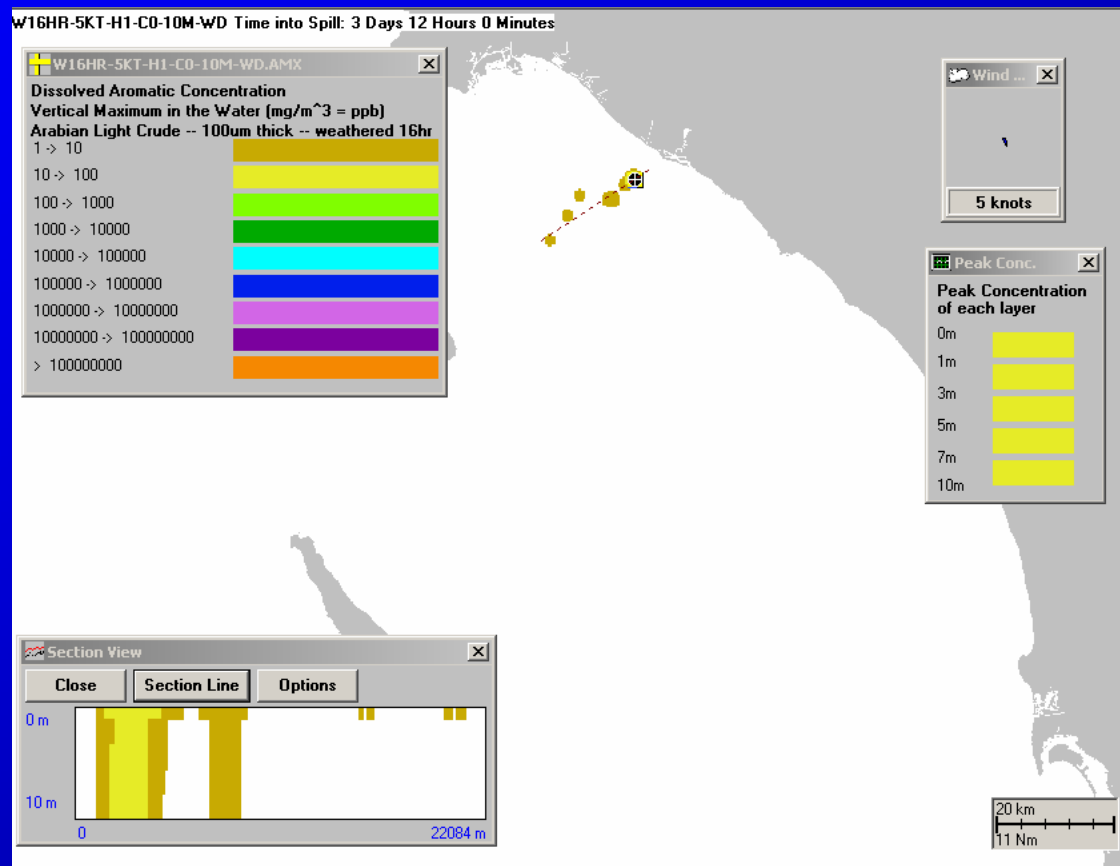

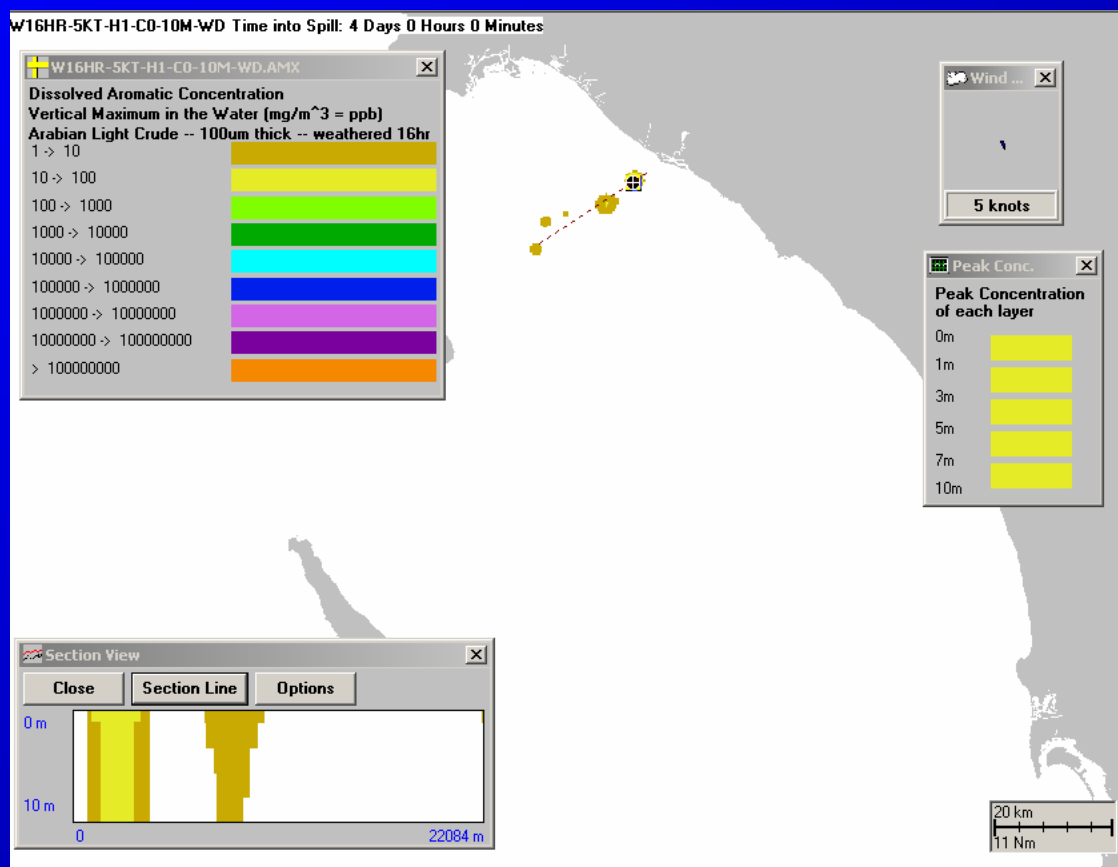

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 72 hrs after dispersant application**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 84 hrs after dispersant application**

**Wind from NNW 5 kts; Currents: 0 kt;  
Dispersant: at 16 hrs; Turbulent mixing to 10m deep;  
Dissolved Aromatic Concentrations: 96 hrs after dispersant application**

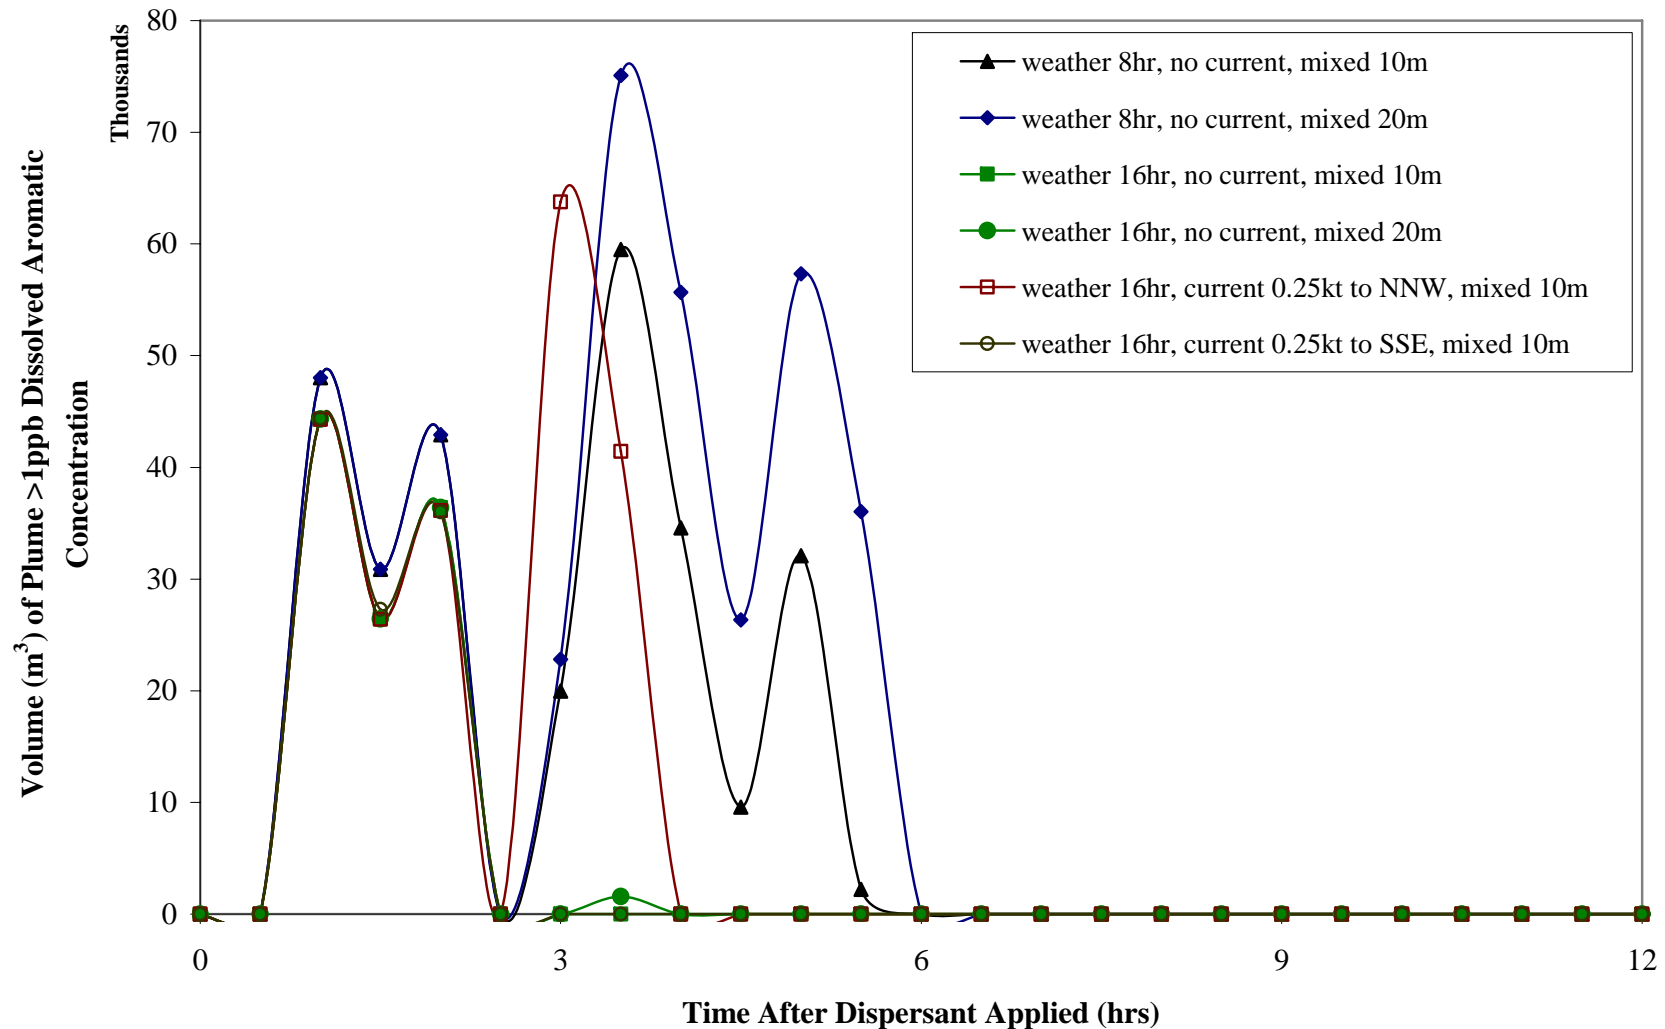

# Modeling Matrix

- Hypothetical spills in open water (similar all locations under same environmental conditions)
- Oil type: Light Arabian crude
- Spill volume: **maximum volume of oil dispersed** by a single sortie of a C-130 (80%, 45% or 20% efficiency)
- Oil thickness: median value for dispersant application (100  $\mu\text{m}$ )
- 3 dispersant application scenarios: none; after weathered 8 hrs, 16 hrs
- 2 wind speed and associated turbulence conditions
  - 5 kts (2.5 m/s), 1  $\text{m}^2/\text{s}$
  - 15 kts (7.5 m/s), 10  $\text{m}^2/\text{s}$
- Restricted to surface mixed layer: 10m, 20m
- Background currents: none, 0.25 kts (13 cm/s) downwind, 0.25 kts (13 cm/s) upwind

# 5 kt (2.5m/s) wind; with no dispersant

Weathering 8 or 16 hrs; Wind 5 kts; Current 0-0.25 kts; Mixed Layer Depth 10 or 20 m; No Dispersant  
at 80% Efficiency

# 15 kt (7.5m/s) wind; with no dispersant

Weathering 8 or 16 hrs; Wind 15 kts; Current 0-0.25 kts; Mixed Layer Depth 10 or 20 m; No Dispersant  
at 80% Efficiency

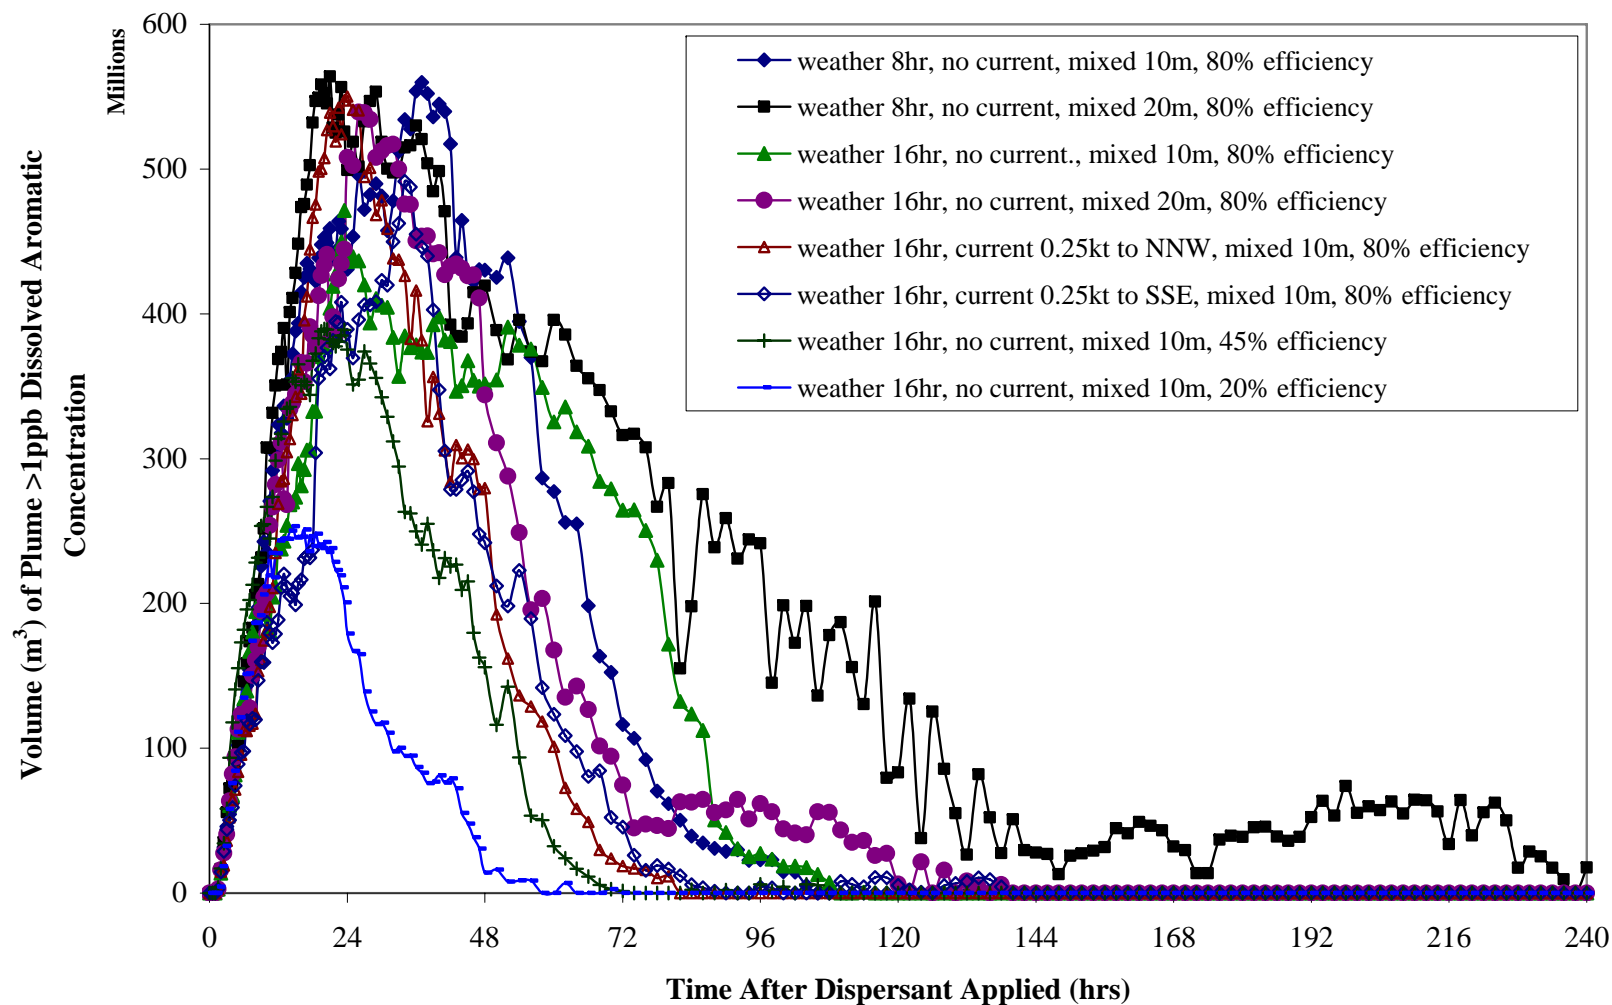

# 5 kt (2.5m/s) wind; with dispersant

# 15 kt (7.5m/s) wind; with dispersant

Weathering 8 or 16 hrs; Wind 15 kts; Current 0-0.25 kts; Mixed Layer Depth 10 or 20 m; With Dispersant at 80%, 45% or 20% Efficiency

## **Summary of Plume Volumes (80% efficiency of 100,000 gal)**

<b>Wind Speed</b>	<b>No Dispersant</b>	<b>With Dispersant</b>
<b>5 kt (2.5 m/s)</b>	<b>Small, short lived (few hrs)</b>	<b>Large, lasts &gt; 10 days</b>
<b>15 kt (7.5 m/s)</b>	<b>Moderately large, lasts 2-3 days</b>	<b>Large, lasts 3-6 days</b>

## Effects of Other Factors on Plume Volume

- Lower efficiency → proportionately smaller plume volume

### Subtle changes:

- With weathering (8 hrs versus 16 hrs)
- Deeper mixed layer
  - If no dispersant → faster dilution
  - With dispersant, more intense plume, so stretching increases plume volume >1ppb
- Background currents generally stretch plume

# **Biological Impacts: Equivalent Areas of 100% Loss**

**Wildlife  
(Birds primarily)**

**Area swept by oil  $>10\text{ }\mu\text{m}$   
thick multiplied by  
probability of encounter  
with water surface**

**Water Column  
(Plankton)**

**Sum of volumes affected  
divided by mixed layer  
depth to calculate area  
affected**

# Summary of Impacts - Area (km<sup>2</sup>)

(80% efficiency; no currents, 10-20m mixed depth)

W = wildlife

PA = Plankton: Average species

PS = Plankton: Sensitive Species

Wind Speed	No Dispersant	With Dispersant
5 kt (2.5 m/s)	W: 197-209 PA: 0 PS: 0	W: 83-100 PA: 0.6-1.8 PS: 7-15
15 kt (7.5 m/s)	W: 391-425 PA: 0 PS: 0.03-0.20	W: 68-108 PA: 0.06-0.09 PS: 1.4-2.2

# Water Column Impacts

- Highest for
  - Large spill volumes
  - High turbulence (storms, blowouts)
  - Maximum dispersant application with high efficiency in one contiguous area (higher in lower winds)
- This analysis was worst case
  - Entire C-130 application in one location
  - 80% efficiency and 20:1 ratio (theoretical maximum)
  - In reality oil is patchy and spread out

# Conclusions

- Tradeoff in favor of dispersant use
  - Wildlife impacts scale of 100s km<sup>2</sup>, even if patchy oil
  - Water column impact – worst case scale of 1 km<sup>2</sup> in mixed layer (10-20 m deep)
- Dispersant use not indicated if
  - Sensitive species or life stages concentrated in area
  - In confined water body where dilution restricted
    - Shallow water < 10m deep
    - In bays and inlets

**Questions?**

# Toxic Components of Oil

**Aliphatics = Straight chain hydrocarbons**  
(e.g., alkanes) –more volatile than soluble

## **Monoaromatic Hydrocarbons (MAHs)**

- **Benzene, Toluene, Ethylbenzene and Xylenes = BTEX**  
– highly soluble, highly volatile, moderately toxic
- **Alkyl-substituted Benzenes** – soluble, less volatile, more toxic

## **Polynuclear Aromatic Hydrocarbons (PAHs)**

- **Naphthalenes (2-ring PAHs)**
  - soluble, less volatile, more toxic
  - with more alkyl chains, less soluble but more toxic
- **3 ring PAHs**
  - Phenanthrenes
  - Fluorenes
  - Dibenzothiophenes
- **4-ring PAHs** – parent compounds bioavailable
- **larger PAHs** insoluble

# Biological Exposure Model

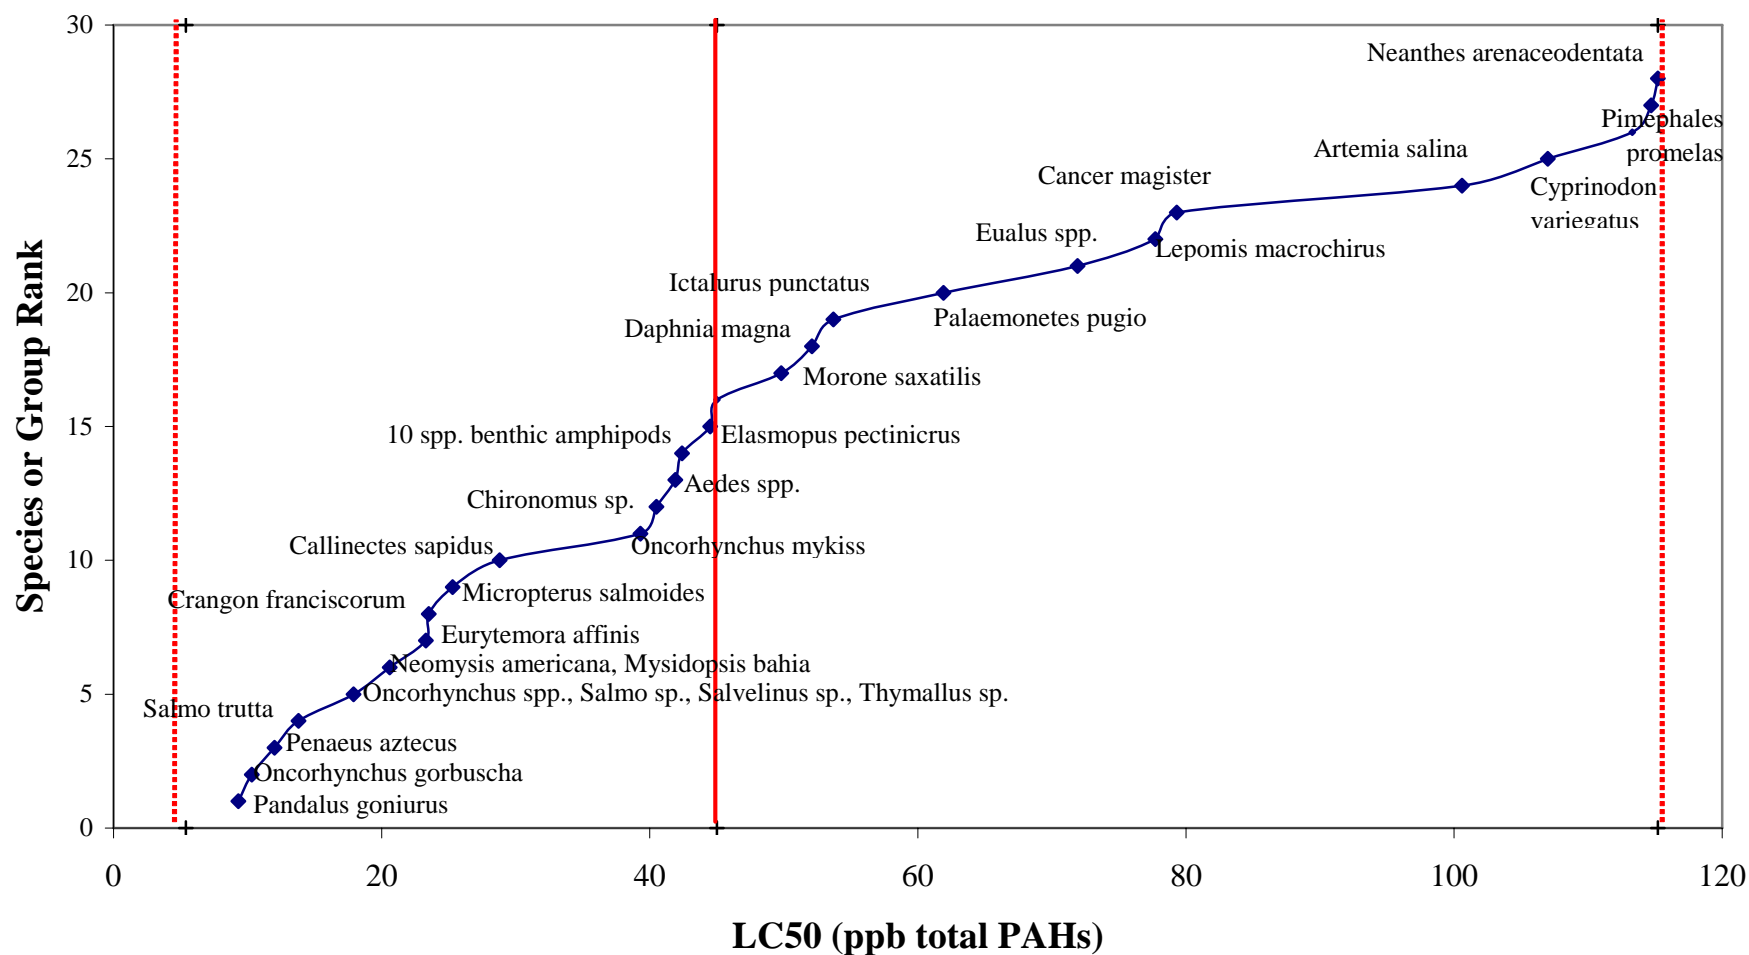

- **Organisms classified by behavior**
  - **Wildlife**
    - % of time on water surface
    - Habitats used
    - Feathers & fur
  - **Fish and Invertebrates**
    - Swimming
    - Drift with currents
    - Stationary
- **Movements of organisms are tracked to calculate exposure of individuals**
- **Impact a function of dose**
  - **Wildlife**
    - Area swept by oil
    - Oil thickness
  - **Fish and Invertebrates**
    - Concentration
    - Exposure time
    - Temperature

# Oil Toxicity

- **1-3 ring aromatics cause most of acute toxicity**
  - in diesel, heavy fuel and crude oil, most from PAHs
  - for gasoline, MAHs also
- **Dissolved aromatic concentration bioavailable**
- **Narcotic mode of action**
- **Additive toxicity – all dissolved aromatics contribute**
- **LC50<sub>mix</sub> from published and verified estimates, based on review of laboratory bioassays with aromatics and oils**

# Species Sensitivity Ranking -- PAHs in Crudes and Fuel Oils

Vertical Red Lines are Geometric Mean and Range for 95% of Species  
(French McCay, 2002)

## Model Calculates Percent Mortality from LC50 and Concentration

## Model Corrects LC50 for Duration of Exposure and Temperature

# **Biological Impacts: Equivalent Areas of 100% Loss**

## **Wildlife (Birds primarily)**

**Area swept by oil >10  $\mu\text{m}$   
thick multiplied by  
probability of encounter  
with water surface:**

**[Area Swept ] [Probability]**

## **Water Column (Plankton)**

**Weighted sum of volumes  
affected at  $\lambda\%$  loss:**

$$\Sigma [ \text{Volume} ] [ \lambda/100 ]$$

**Divide by mixed layer depth  
to calculate area affected**

## Scenario

**Pre-Weathering for 16 hrs before potential treatment**

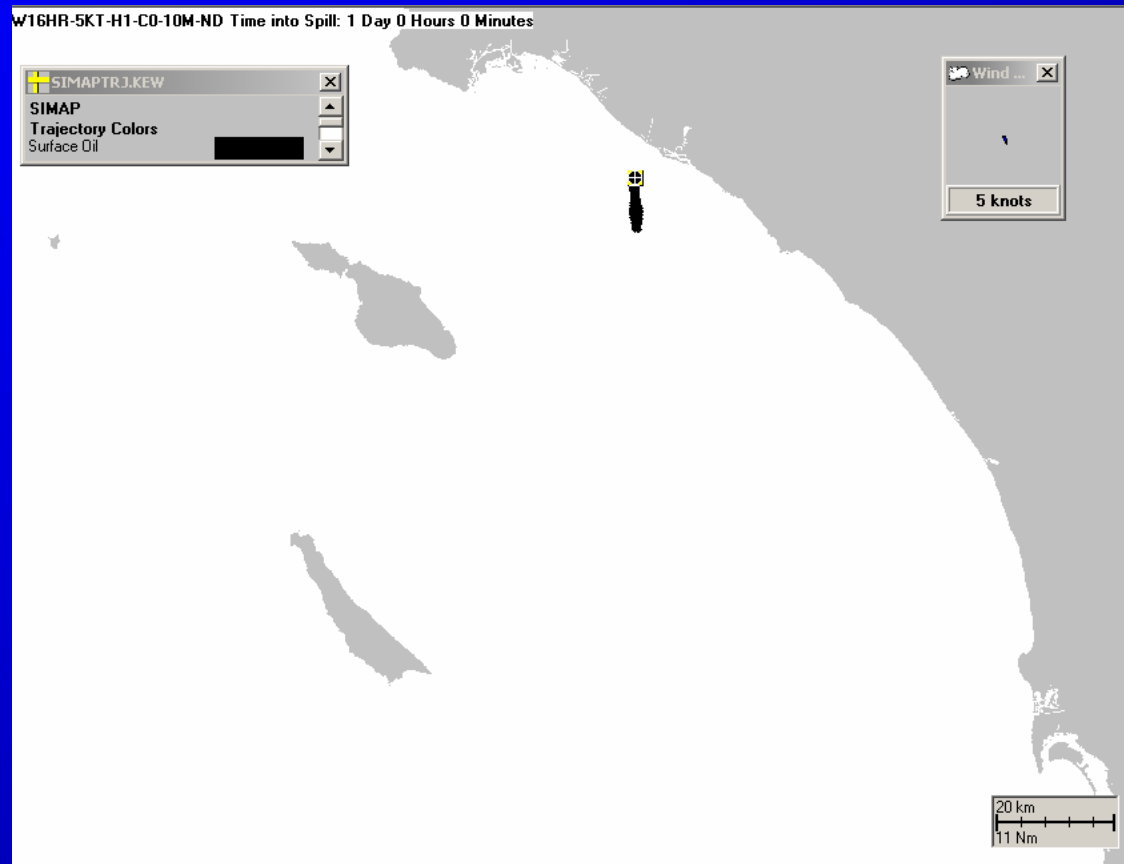

**Wind from NNW 5 kts;**

**Currents: 0 kt;**

**Dispersant: none**

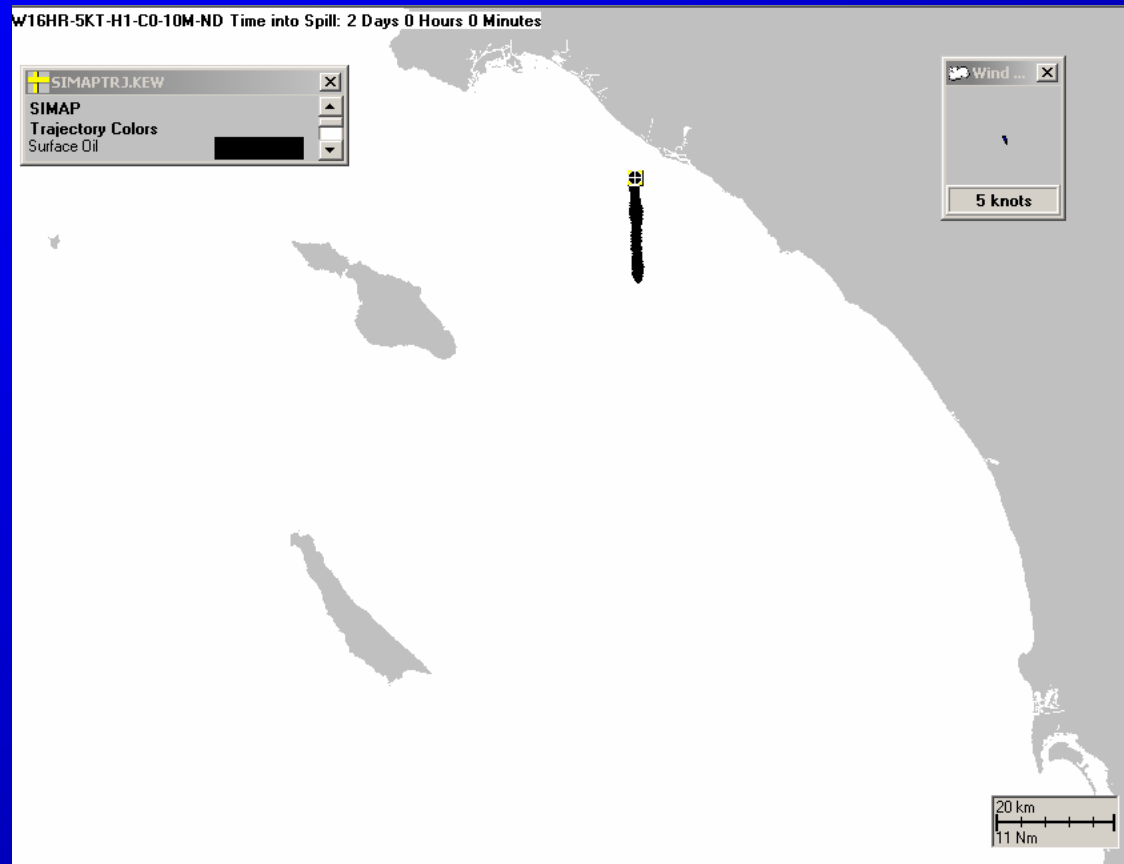

**Turbulent Mixing to 10m deep in Surface Mixed Layer**
