4.0 ENVIRONMENTAL JUSTICE

4.1 CSLC ENVIRONMENTAL JUSTICE POLICY

Environmental justice is defined by California law as "the fair treatment of people of all races, cultures, and incomes with respect to the development, adoption, implementation, and enforcement of environmental laws, regulations, and policies." This definition is consistent with the Public Trust Doctrine principle that the management of trust lands is for the benefit of all of the people. The California State Lands Commission (CSLC) adopted an environmental justice policy in October 2002 to ensure that environmental justice is an essential consideration in the agency’s processes, decisions, and programs. Through its policy, the CSLC reaffirms its commitment to an informed and open process in which all people are treated equitably and with dignity, and in which its decisions are tempered by environmental justice considerations.

As part of the CSLC environmental justice policy, the CSLC pledges to continue and enhance its processes, decisions, and programs with environmental justice as an essential consideration by:

- Identifying relevant populations that might be adversely affected by CSLC programs or by projects submitted by outside parties for its consideration.
- Seeking out community groups and leaders to encourage communication and collaboration with the CSLC and its staff.
- Distributing public information as broadly as possible and in multiple languages, as needed, to encourage participation in the CSLC’s public processes.
- Incorporating consultations with affected community groups and leaders while preparing environmental analyses of projects submitted to the CSLC for its consideration.
- Ensuring that public documents and notices relating to human health or environmental issues are concise, understandable, and readily accessible to the public, in multiple languages, as needed.
- Holding public meetings, public hearings, and public workshops at times and in locations that encourage meaningful public involvement by members of the affected communities.
- Educating present and future generations in all walks of life about public access to lands and resources managed by the CSLC.
- Ensuring that a range of reasonable alternatives is identified when siting facilities that may adversely affect relevant populations and identifying, for the CSLC’s consideration, those that would minimize or eliminate environmental impacts affecting such populations.
• Working in conjunction with federal, State, regional, and local agencies to ensure consideration of disproportionate impacts on relevant populations, by instant or cumulative environmental pollution or degradation.

• Fostering research and data collection to better define cumulative sources of pollution, exposures, risks, and impacts.

• Providing appropriate training on environmental justice issues to staff and the CSLC so that recognition and consideration of such issues are incorporated into its daily activities.

• Reporting periodically to the CSLC on how environmental justice is a part of the programs, processes, and activities conducted by the CSLC and by proposing modifications as necessary.

4.1.1 Methodology

The CSLC environmental justice policy does not specify a methodology for conducting programmatic-level analysis of environmental justice issues. Due to the limited extent of the Project’s impacts on the human environment, as established in Section 3 of this document, this section provides a qualitative consideration of the Project’s potential to disproportionately affect low-income or minority communities.

This analysis focuses on whether the Project’s impacts would have the potential to affect areas of high-minority populations and/or low-income communities disproportionately and thus would create an adverse environmental justice effect. For the purpose of the environmental analysis, the Project’s inconsistency with the CSLC’s Environmental Justice Policy would occur if the Project would:

• Have the potential to disproportionately affect minority and/or low-income populations adversely; or

• Result in a substantial, disproportionate decrease in employment and economic base of minority and/or low-income populations residing in immediately adjacent communities.

4.1.2 Project Analysis

The Project’s limited impact on the human environment is established in various sections of this document, including Section 3.1 (Aesthetics), Section 3.3 (Air Quality), Section 3.7 (Greenhouse Gas Emissions), 3.8 (Hazards and Hazardous Materials), 3.9 (Hydrology and Water Resources), 3.12 (Noise), Section 3.15 (Recreation) and Section 3.16 (Traffic/Transportation). The discussion below considers the Project’s potential to disproportionately affect any low-income or minority communities. The Project is located adjacent to existing industrial uses in Suisun Bay and the West by property owned by the federal government for use as a Military Ocean Terminal. Surrounding land uses are
largely industrial with extensive tidal marsh designated for open space/conservation as habitat for sensitive species by Contra Costa County. The closest residences are located approximately 1 mile to the southeast of the Project site in Bay Point. Due to this distance between the Project site and the nearest residential neighborhood and the small-scale and temporary nature of the outfall pipe removal and demolition, there would be no direct impact on residential communities, regardless of their socioeconomic makeup.

The Project has the potential to temporarily impact boating in the immediate vicinity of the Project work area on the Bay. However, due to the temporary nature of the outfall pipe removal activities and the limited surface area of the Bay taken by the removal activities, the Project would have a less than significant impact on users of the Bay.

The Project has no potential to disproportionately affect any low-income or minority community that may reside in nearby communities or use the surrounding area for recreation or commerce. Furthermore, the CSLC is complying with its environmental justice policy by subjecting its decision on this Project to public involvement through the CEQA process, which will give people of all socioeconomic backgrounds the opportunity to learn about and comment on the Project.
