

Comment Letter G

Chris

I talked with the city Engineer, Diana Langley and she acted like she was unaware of this action. She talked like she was going to contact you.

Anyway I am sending a picture of the poles I was questioning. I assume these two poles would be relocated. I never could find a copy of the project with a map to run this down.

I would just like to go on record to request that the two poles be relocated out of the traffic pattern.

Thank you for your attention to this matter.

Dottie

G-1 Comment acknowledged. The two poles referenced in the commenter's email are currently located along the south side of Pease Road. MND Section 2.4.1, Transmission Line Right-of-Way and Additional Construction Work Areas, states that between the Pease Substation and State Route 99, the future line would be located on the north side of Pease Road in an existing franchise or utility corridor area.

G-2 This photo illustrates the location of the two poles referenced in the commenter's first comment. See response G-1.
