## 1.0 INTRODUCTION

---

### 1 1.1 PROJECT LOCATION AND BACKGROUND

2 On December 6, 2016, the California State Lands Commission (CSLC), as lead agency  
3 under the California Environmental Quality Act (CEQA), adopted a Mitigated Negative  
4 Declaration (MND) for the Chevron Long Wharf Maintenance and Efficiency Project  
5 (Project) (State Clearinghouse [SCH] No. 2016082014) ([Item C25](#), December 6, 2016).  
6 The Project site is located in central San Francisco Bay (Bay), just south of the eastern  
7 terminus of the Richmond-San Rafael Bridge, adjacent to the Chevron Richmond  
8 Refinery, Contra Costa County. Figure 1-1 shows the Project site and vicinity.

### 9 1.2 ORIGINAL PROJECT

10 The Project authorizes Chevron Products Company (Chevron) to implement  
11 modifications to four berths at the Chevron Richmond Refinery Long Wharf (Long Wharf)  
12 to: improve its efficiency; comply with Marine Oil Terminal Engineering and Maintenance  
13 Standards (MOTEMS)<sup>1</sup> requirements; and enhance the safety of crews and operators.  
14 Project construction is scheduled to begin in 2018 and be completed in 2022. The  
15 Richmond Long Wharf operates 7 days per week, and most Project construction work  
16 must be conducted while ships are not at the berth under construction. As described in  
17 the MND, the Project includes a seismic retrofit to the Berth 4 loading platform consisting  
18 of the installation of piles and over-water structures and the following modifications to four  
19 berths (Berths 1, 2, 3, and 4):

- 20 • Replace gangways and cranes
- 21 • Add new mooring hooks, standoff fenders, dolphins and catwalks
- 22 • Modify the fire water system

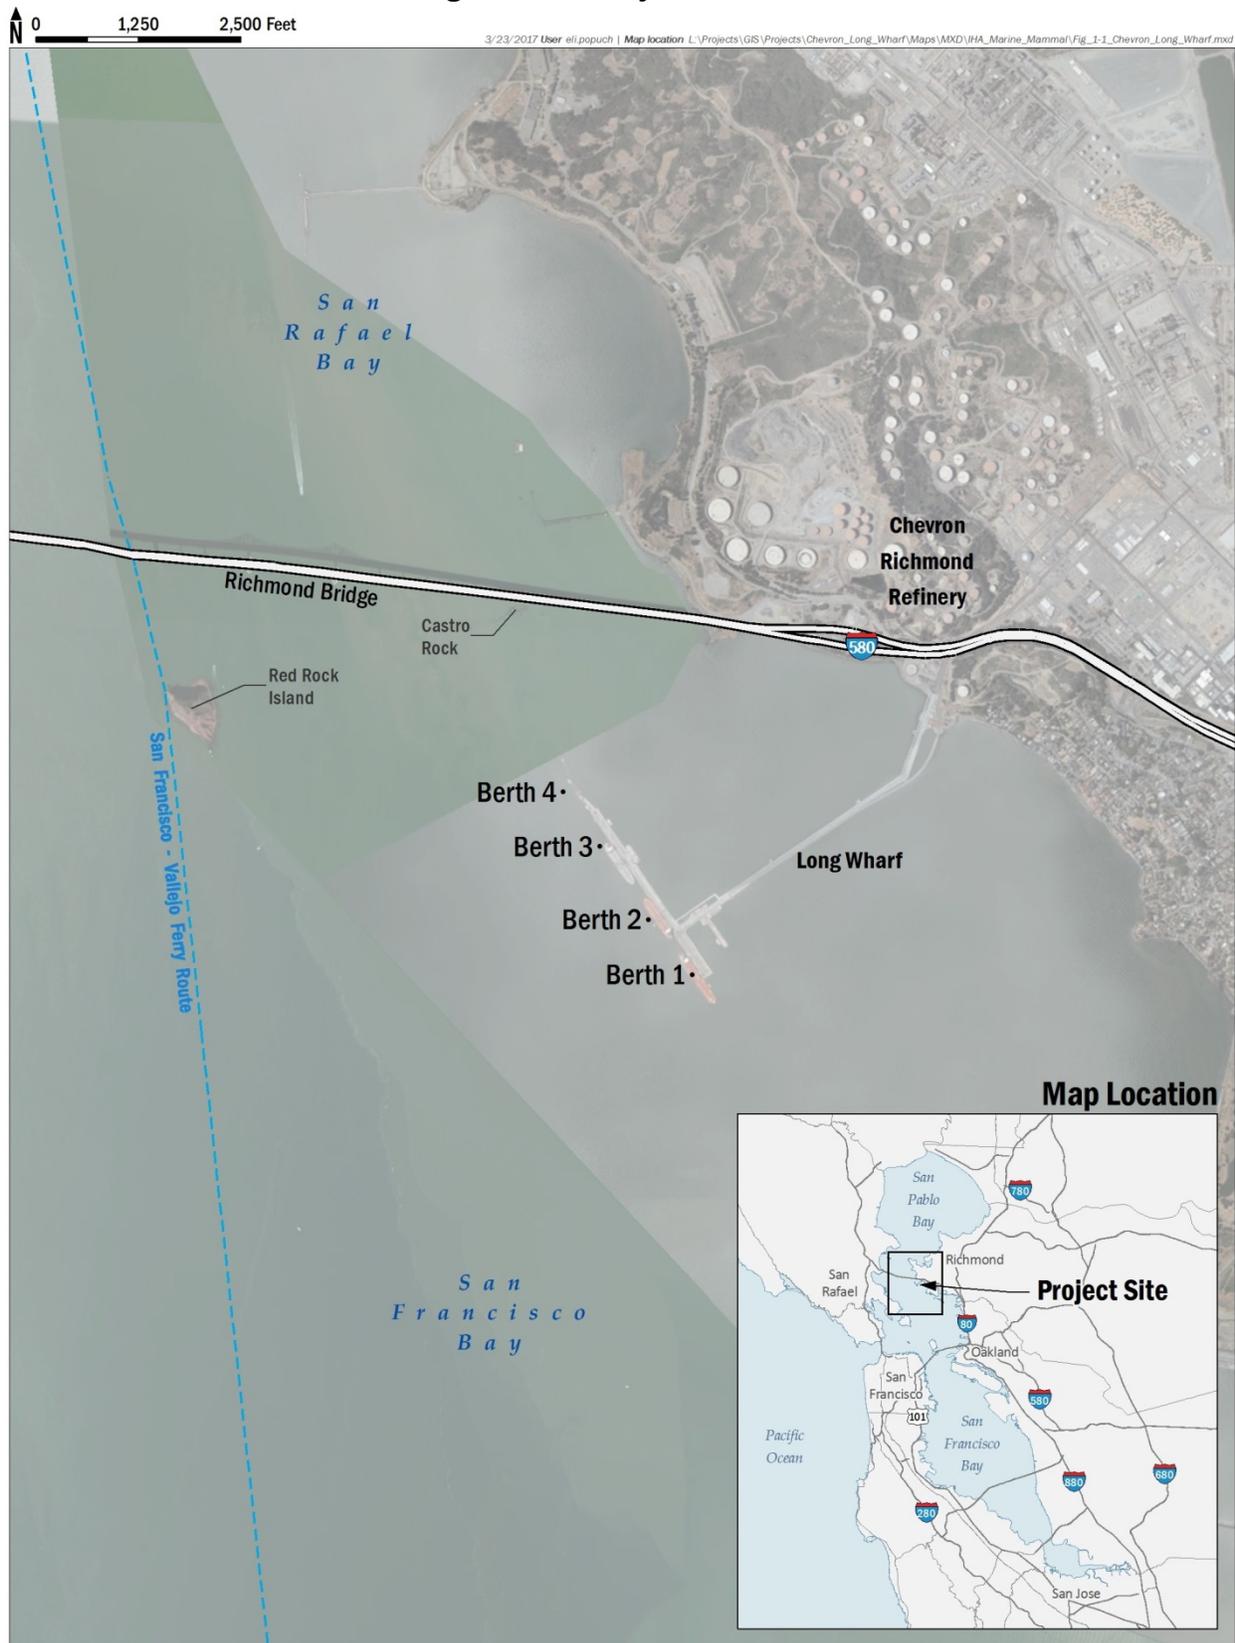

### 23 1.3 PROJECT MODIFICATION

24 Section 3.12 (Noise) of the MND stated that construction activities would not occur at  
25 night or on weekends or legal holidays. Following the recent detailed development of the  
26 construction schedule, Chevron has determined that construction work on some  
27 weekends and holidays may be required in order to maximize and efficiently use  
28 scheduled berth outages, minimize disruption to Long Wharf operations so that the Long  
29 Wharf can remain operational during construction, and complete in-water work during the  
30 approved work window from June 1 to November 30 each year in accordance with the  
31 National Marine Fisheries Service Long Term Management Strategy. Therefore, the  
32 CSLC has prepared this Addendum to analyze the effects of occasional work on  
33 weekends and holidays as-needed (Project modification”).

---

<sup>1</sup> MOTEMS are codified in California Code of Regulations, title 24, California Building Code, Chapter 31F—  
Marine Oil Terminals (Cal. Code Regs., tit. 24, § 3101F et seq.).

Figure 1-1. Project Location

1 Under normal operations, vessels are present at Berth 2 and 3 nearly 70 to 80 percent of  
2 the time, and at Berths 1 and 4 nearly 50 percent of the time. For Berth 2, 70 to 80 percent  
3 occupancy equates to a vessel being present about 6 days per week. The single day per  
4 week when a vessel is not present at Berth 2 could fall on a weekend or holiday, and  
5 therefore, all construction work from barges would need to be performed during that one  
6 available day to avoid impacting regular operation of the Long Wharf.

7 For more complicated activities involving barges lifting heavy equipment or driving piles,  
8 episodically, there would be berth outages (when a ship cannot call the berth) scheduled  
9 for 3- to 9-day durations. These outages may also potentially include weekend or holiday  
10 days. Any relatively noisy activities within these outages, such as driving the eight steel  
11 piles at Berth 4, are anticipated to be very low frequency, short duration events where the  
12 act of driving the pile is anticipated to take less than 2 hours per pile and may or may not  
13 fall on a weekend or holiday. Consistent with the original project, no nighttime construction  
14 will occur.

#### 15 **1.4 PROJECT BACKGROUND AND OBJECTIVES**

16 The Long Wharf has been in its current location since the early 1900s.<sup>2</sup> The Long Wharf,  
17 which has six active transfer berths for receiving raw materials and shipping final  
18 products, accommodates the transfer of roughly 145 million barrels per year of crude oil,  
19 refined oil and petroleum products. During 2014 and 2015, the Long Wharf had an  
20 average of 710 vessel and barge calls per year. The existing gangways, which are used  
21 to access ships that call at the Long Wharf, were installed in 1972 (except at Berth 4,  
22 where the current gangway was installed in 2012).

23 The Long Wharf's operations are regulated primarily by the CSLC through a State Lands  
24 lease (Lease No. PRC 8818), CSLC regulations (Cal. Code Regs., tit. 2, § 2300 et seq.),  
25 and MOTEMS. In 2009, Chevron and the CSLC executed the Long Wharf 30-year Lease  
26 Agreement (Lease) and certified the Chevron Richmond Long Wharf Marine Terminal  
27 Lease Consideration Environmental Impact Report (Lease EIR) (SCH No. 1998112080)  
28 ([Item C42](#), January 29, 2009). A subsequent lawsuit challenged the Lease EIR pursuant  
29 to CEQA, and in 2011, the California Court of Appeal upheld the Lease EIR and Lease in  
30 *Citizens for East Shore Parks v. State Lands Commission* (2011) 202 Cal. App. 4th 549.  
31 Execution of the Lease triggered Chevron's compliance requirements pursuant to  
32 Attachment D, Mitigation Monitoring Program (MMP) of the Lease EIR. To demonstrate  
33 compliance with the conditions in the Lease EIR MMP, CSLC staff representatives  
34 conducted a series of annual onsite audits of Chevron's Lease compliance documentation  
35 between 2010 and 2014. Since 2010, CSLC staff has found Chevron to be in full  
36 compliance with all of the Lease EIR MMP requirements. Due to consistent compliance  
37 with all conditions, the audits were changed to every 2 years in 2015.

---

<sup>2</sup> A detailed history of Long Wharf construction and operations is available in the EIR for the Chevron Richmond Long Wharf Marine Terminal Lease Consideration (CSLC 2006).

1 Operating efficiency at the Long Wharf would be improved by eliminating current  
2 restrictions on vessel approach speeds at Berth 2 and balancing use of Berths 1, 2, and  
3 3 by modifying Berth 1 to accept barges. The Berth 4 loading platform would be  
4 seismically retrofitted in compliance with MOTEMS to stiffen the structure and minimize  
5 the movement in the event of a Level 1 or 2 earthquake.<sup>3</sup>

6 Replacing portable gangways with permanent gangways at Berths 1, 2, and 3 will improve  
7 the safety of crews and operators. The new gangways are needed to accommodate  
8 changes in the vessel fleet (e.g., hull geometry) over the years and to accommodate sea-  
9 level rise. The existing Berth 2 fender system was designed and installed in 1940. Since  
10 then, design requirements have changed and vessel size has increased significantly. The  
11 timber pile fender system at Berth 2 does not meet current MOTEMS standards for  
12 berthing velocity, whereas existing fenders at Berths 1 and 4 are MOTEMS compliant.

13 The objectives of the Project as approved in December 2016, therefore, are to upgrade  
14 Berths 1, 2, 3, and 4 to:

- 15 • Comply with current MOTEMS requirements
- 16 • Improve efficiency of the Long Wharf
- 17 • Perform a seismic retrofit to the Berth 4 loading platform in compliance with  
18 MOTEMS to stiffen the structure and minimize the movement in the event of a  
19 Level 1 or 2 earthquake
- 20 • Eliminate berthing velocity restrictions at Berth 2
- 21 • Improve safety conditions for crews and operators
- 22 • Accommodate all sizes of vessels that visit the Long Wharf

---

<sup>3</sup> Level 1 Earthquake: No or minor structural damage without interruption in service or with minor temporary interruption in service. Level 2 Earthquake: Controlled inelastic behavior (prevention of structural collapse) with repairable damage resulting in temporary closure, service restorable within months, and the prevention of a major spill, defined as 1,200 barrels of a petroleum product.

## 2.0 DESCRIPTION OF PROJECT MODIFICATION

---

### 1 2.1 ADDENDUM PURPOSE AND NEED

2 Pursuant to State CEQA Guidelines section 15164, once a MND has been adopted for a  
3 project, no subsequent document shall be prepared unless the lead agency determines  
4 certain specific circumstances are present. These circumstances only occur when there  
5 is the involvement of a new significant impact or a substantial increase in a previously  
6 identified impact. If the proposed changes do not involve a new or substantially increased  
7 significant impact resulting from a change in the project or a change in the circumstances  
8 under which a project would occur, but instead reflect minor modifications or additions,  
9 the lead agency is to prepare an addendum to the CEQA document, in this case, the  
10 previously adopted MND for the Project.

11 The purpose of this Addendum to the MND is to verify that the Project modification  
12 allowing construction work to occur on weekend and holiday days would not cause  
13 significant, adverse impacts to the environment. As presented below, none of the  
14 conditions described in State CEQA Guidelines section 15162 calling for the preparation  
15 of a subsequent environmental document has occurred. As a result, an addendum is the  
16 appropriate CEQA document for analysis and consideration of the proposed Project  
17 schedule change.

18 Circulation of an addendum for public review is not necessary (State CEQA Guidelines,  
19 § 15164, subd. (c)); however, the addendum must be considered in conjunction with the  
20 previously adopted MND for the Project by the decision-making body (State CEQA  
21 Guidelines, § 15164, subd. (d)).

### 22 2.2 COMPONENTS OF PROJECT MODIFICATION

23 The Project modification would consist of allowing the Project to work on weekends and  
24 holidays, where necessary, to maximize scheduling opportunities to work when Berths  
25 are unoccupied and minimize disruption to Long Wharf operations. Chevron's Applicant  
26 Proposed Measure (APM) **APM NOI-3** (Prohibit the start-up of machines or equipment  
27 before 7 a.m. and after 7 p.m. Monday through Friday) discussed on page 3-90 of the  
28 MND has been expanded as a result of the Project modification. APM NOI-3 would be  
29 expanded to also prohibit the start-up of machines or equipment before 9 a.m. and after  
30 7 p.m. on weekends and holidays. There would be no changes to any other Project  
31 features described in the adopted MND.

### 3.0 ENVIRONMENTAL ASSESSMENT

---

1 The following comparative analysis was undertaken to analyze whether the Project  
2 modification proposed by Chevron would have any significant environmental impacts that  
3 were not addressed in the MND adopted by the CSLC in 2016. The comparative analysis  
4 (1) discusses whether impacts are increased, decreased, or unchanged from the  
5 conclusions discussed in the MND, and (2) addresses whether any changes to mitigation  
6 measures are required. The MND and this Addendum found no impacts to occur to the  
7 following environmental issue areas included in the State CEQA Guidelines Appendix G  
8 Environmental Checklist: Agriculture and Forestry Resources, Cultural and  
9 Paleontological Resources, Cultural Resources–Tribal, Land Use and Planning, Mineral  
10 Resources, Population and Housing, Public Services, and Recreation; therefore, they are  
11 not discussed further in this Addendum.

12 The environmental issue area that the proposed schedule change may affect the most is  
13 associated with Noise, which is addressed first followed by the remaining issue areas.

14 **Noise.** The nearest sensitive noise receptors are residences along the northern portion  
15 of Ocean Avenue in Pt. Richmond, which are approximately 4,700 feet east of the Project  
16 site. The City of Richmond (City) Community Noise Ordinance construction noise  
17 thresholds that apply to this area are:

- 18 • 60 dB: weekdays
- 19 • 55 dB: weekends and legal holidays from 9:00 a.m. to 8:00 p.m.

20 The noise analysis in the MND showed that modeled construction noise from the Project  
21 during weekdays could range from 55 to 56 decibels (dB) at the closest sensitive noise  
22 receptor without the use of any noise shielding, which was below the City threshold of 60  
23 dB for weekdays but could potentially exceed the weekend threshold of 55 dB by 1 dB.  
24 The analysis presented in the MND represents the worst-case, conservative noise  
25 exposure because it did not consider noise attenuation associated with intervening  
26 structures and atmospheric absorption. Implementation of measures to minimize ambient  
27 noise, discussed below, will reduce construction-related sound levels below the 55 dB  
28 threshold of significance for weekend and legal holiday noise.

29 During construction that would occur on occasional weekends and holidays, Chevron  
30 would implement Applicant Proposed Measures (APM), as described in the MND (see  
31 Table 3-1). In particular, implementation of APM NOI-8, using noise-attenuating buffers  
32 such as structures or truck trailers between noise generation sources and sensitive  
33 receptors, would lower sound levels by at least 1 dB which would be below the  
34 construction noise weekend and holiday threshold of 55 dB. For example, acoustical  
35 blankets, also known as isolation blankets, made from sound absorbing materials such  
36 as mineral or rock wool, fiberglass, hair felt or wood fibers, can improve sound attenuation  
37 when placed in the airspace between the noise generator and noise sensitive receptor.

- 1 Sound blankets have been used in construction and can attenuate noise as much as 10  
 2 dB (Los Angeles County Metropolitan Transportation Authority [LA Metro] 2017, Federal  
 3 Highway Administration 2011).
- 4 This change to the Project requires an addition to Chevron’s APM NOI-3. APM NOI-3  
 5 would be modified to “Prohibit the start-up of machines or equipment before 7 a.m. and  
 6 after 7 p.m. Monday through Friday, and before 9 a.m. and after 7 p.m. on weekends and  
 7 holidays.” (Added text is underlined.)

**Table 3-1. Applicant Proposed Measures (APMs) to minimize potential construction noise at the source**

<b>APM NOI-1</b>	Chevron will provide written notification to potentially affected residents before construction, identifying the type, duration, and frequency of construction activities to residences directly exposed to the Project construction noise. Notification materials shall identify a mechanism for residents to register complaints with the appropriate jurisdiction if construction noise levels are overly intrusive or construction occurs outside the permitted hours. Recommendations to assist noise-sensitive land uses in reducing interior noise levels (e.g., closing windows and doors) shall be included in the notification.
<b>APM NOI-2</b>	Chevron will designate a disturbance coordinator and conspicuously post this person's number around the Project site, in adjacent public spaces, and in construction notifications. The disturbance coordinator shall be responsible for responding to any complaints about construction activities. The disturbance coordinator shall receive all public complaints about construction disturbances and be responsible for determining the cause of the complaint and implementation of feasible measures to be taken to alleviate the problem.
<b>APM NOI-3</b>	Prohibit the start-up of machines or equipment before 7 a.m. and after 7 p.m. Monday through Friday, <u>and before 9 a.m. and after 7 p.m. on weekends and holidays.</u>
<b>APM NOI-4</b>	Use electrically powered equipment instead of internal combustion equipment where practicable and feasible.
<b>APM NOI-5</b>	Restrict the use of bells, whistles, alarms, and horns to safety-warning purposes.
<b>APM NOI-6</b>	Equip all construction equipment with noise-reduction devices such as mufflers to minimize construction noise and operate all internal combustion engines with exhaust and intake silencers.
<b>APM NOI-7</b>	Locate fixed construction equipment (e.g., compressors and generators), construction staging and stockpiling areas, and construction vehicle routes as far as feasible from noise-sensitive receptors.
<b>APM NOI-8</b>	Use noise-attenuating buffers such as structures or truck trailers between noise generation sources and sensitive receptors, where feasible and particularly in locations subject to prolonged construction.

1 In order to ensure that the noise generated by construction on weekend and holiday days  
2 would not exceed the 55 dB threshold of significance for weekend and holiday daytime  
3 noise, Chevron shall be required to implement APM NOI-8, already identified in the MND,  
4 requiring use of noise attenuating buffers. With implementation of APM NOI-8, the Project  
5 modification would therefore not result in new noise impacts or require new mitigation  
6 measures.

7 **Aesthetics.** Construction on certain weekends and holidays would result in the same  
8 activities described in the MND and would not result in any changes in permanent  
9 structures or lighting. Therefore, no new impacts have been identified and no new  
10 mitigation measures are required.

11 **Air Quality.** The Project modification would not result in changes to construction  
12 equipment, durations or use, vehicle trips, or the types of construction activities described  
13 in the MND. This is because the Project modification will not increase the number of days  
14 that construction occurs or increase the intensity of construction analyzed in the MND.  
15 The Project modification allows construction that would have occurred on weekdays to  
16 occur on weekends and holidays when berths are empty and available for construction  
17 work to occur. Therefore, there would be no changes in emissions described in the MND  
18 and no new mitigation measures would be necessary.

19 **Biological Resources.** Occasional weekend and holiday work would not result in  
20 changes to biological impacts. The Project modification would not increase impacts to  
21 habitat or species as it would not result in increased structural area, fill, or construction  
22 activities. The revised schedule is also designed to help Chevron complete in-water work  
23 during the approved work window from June 1 to November 30 each year in accordance  
24 with the National Marine Fisheries Service Long Term Management Strategy. No new  
25 mitigation measures would be required.

26 **Geology and Soils.** The Project modification would result in the same impacts regarding  
27 geology and soils since the locations of proposed Project features would not change. The  
28 Project modification would not result in new geology or soils impacts compared with the  
29 MND and no new mitigation measures are required.

30 **Greenhouse Gas (GHG) Emissions.** The Project modification would not involve new  
31 construction activities or use construction equipment different than that described and  
32 analyzed in the MND. Therefore, there would be no changes in GHG emissions described  
33 and no new mitigation measures would be necessary.

34 **Hazards and Hazardous Materials.** The Project modification does not change the nature  
35 of the hazardous materials that will be used by the Project, the manner in which those  
36 hazardous materials will be handled and used, or the potential for the release of  
37 hazardous and hazardous materials. The Project modification would not result in

1 additional sources or quantities of hazardous material. Therefore, the Project modification  
2 would not result in new impacts and no new mitigation measures are required.

3 **Hydrology and Water Quality.** Occasional weekend and holiday work would not result  
4 in the increased potential for discharges or any changes to the water quality or hydrology  
5 impacts described in the MND, and no new impacts have been identified. No new  
6 mitigation measures are required.

7 **Transportation/Traffic.** Occasional weekend and holiday work would not result in  
8 increased traffic. Truck and worker vehicle trips for the overall project were assessed in  
9 the MND and work on some weekends and holidays would not increase the total number  
10 of trips. This is because the Project modification will not increase the number of days that  
11 construction occurs or increase the intensity of construction analyzed in the MND. The  
12 Project modification allows construction that would have occurred on weekdays to occur  
13 on weekends and holidays when berths are empty and available for construction work to  
14 occur. The Project modification would not conflict with applicable congestion  
15 management programs for designated roads or highways nor result in additional traffic  
16 impacts or require new mitigation measures.

17 **Utilities and Service Systems.** The Project modification would not result in increased  
18 wastewater treatment, require construction of new water or wastewater facilities, or storm  
19 water drainage facilities. Occasional work on weekends or holidays would not increase  
20 solid waste. No new mitigation measures are required.

## 4.0 DETERMINATION/ADDENDUM CONCLUSION

---

1 As detailed in the analysis presented above, this Addendum to the MND adopted by the  
2 CSLC in December 2016, as lead agency under the CEQA, supports the conclusion that  
3 the Project modification allowing occasional construction work on weekends and holidays  
4 would not result in any new significant environmental effects. Specifically, the Project  
5 modification allowing construction to occur on occasional weekend and holiday days is a  
6 minor revision to the Project. An addition to APM NOI-3 to include restrictions on the  
7 construction schedule on weekends and holidays, and mandatory implementation of APM  
8 NOI-8, which was already included in the MND, will ensure the Project modification does  
9 not exceed the 55 dB threshold of significance for construction noise on weekend or  
10 holiday days. Based on this analysis, as well as substantial evidence in the light of the  
11 whole record, the CSLC determines the following:

- 12 • No substantial changes proposed to the Project which will require major revisions  
13 of the MND due to the involvement of new significant environmental effects or a  
14 substantial increase in the severity of previously identified significant effects (State  
15 CEQA Guidelines, § 15162, subd. (a)(1)).
- 16 • No substantial changes will occur with respect to the circumstances under which  
17 the Project is undertaken requiring major revisions of the previous MND due to the  
18 involvement of new significant environmental effects or a substantial increase in  
19 the severity of previously identified significant effects (State CEQA Guidelines, §  
20 15162, subd. (a)(2)).
- 21 • There is no new information of substantial importance, which was not known and  
22 could not have been known with the exercise of reasonable diligence at the time  
23 the previous MND was adopted by the CSLC (State CEQA Guidelines, § 15162,  
24 subd. (a)(3)).

25 The Project is consistent with State CEQA Guidelines section 15164 in that only a minor  
26 change has been made to the Project, and none of the conditions described in State  
27 CEQA Guidelines section 15162 has occurred. Therefore, the CSLC has determined that  
28 no subsequent or supplemental document is required.
